By His Honor CHARLES BROWN, Esq., Superintendent of the Province of Taranaki.

And it is by the same Act enacted that the Governor in Council may by warrant under his hand from time to time delegate to the Superintendent of any Province within the Colony all or any of the powers vested in the Governor or Governor in Council by the said Act, subject to such regulations as he may think fit, and may from time to time

And whereas the Governor has, with the advice and consent of the Executive Council of New Zealand, delegated to the Superintendent of Taranaki certain powers conferred upon him by the said Diseased Cattle Act, subject to certain regulations made by the Governor in Council under the said recited Act, bearing date the 14th day of September, 1864.

THE following Notice to Mariners received from the Government of the Cape of Good Hope is published for general information.

FRED. A. WELD.

#### NOTICE TO MARINERS.

TABLE BAY NEW LIGHTS AND FALSE BAY BEACON.

##### *Robben Island Light.*

A Lighthouse has been erected on the Southernmost (and highest) hill of Robben Island, Minto Hill, at an elevation of 154 feet above the sea, a light from which will be exhibited on the 1st of January, 1865.

The Lighthouse is in latitude  $33^{\circ} 48' 52''$  S., longitude  $18^{\circ} 22' 33''$  E.

The building is a cylindrical shaft, 60 feet high, painted in horizontal *Red and White bands*, exhibiting a *White* fixed light of the 1st order, dioptric. It is visible all round the horizon, and can be seen from a ship in clear weather 19 or 20 miles.

##### *Changes in the Green and Mouille Point Lights.*

The two fixed lights in the Green Point square tower will be abandoned on the above date, and a *White* light of the 3rd order dioptric, flashing at intervals of 10 seconds, substituted. It is 65 feet above the sea, and can be seen in clear weather from a ship 13 miles.

##### *Mouille Light.*

The old pyramidal building which carried this light will be demolished, and replaced by a cylindrical shaft, 30 feet high, painted in alternate *Black and White bands*, and carrying a *Red* light of the 4th order dioptric. It stands at an elevation of 44 feet above the sea, and can be seen about 10 miles in clear weather.

##### *Sailing Directions.*

Ships bound for Table Bay from the southward should not shut in the Cape Point light with the land at Slangkop Point until the Robben Island light—which will be seen before the one on Green Point—bears N.E.  $\frac{1}{2}$  E., when they may steer for it; and when the Green Point light bears east, an E. N.E. course may be followed until the red light on Mouille Point comes open to the northward of Green Point light, bearing S.E. by S. This course will lead clear of the Vulcan Rock and the reefs that lie to the northward of it. The course may now be altered to S.E. by E.  $\frac{1}{2}$  E., which will carry them one mile outside Mouille Point, and within this distance no stranger should round the point at night. When the Mouille light bears S.S.W., a S. by E. course for the anchorage may be shaped, anchoring as soon as the Green Point light is shut in with the hillocks near Mouille Point, or with Mouille Point light bearing N.W. about one mile off, in from 6 to 8 fathoms. Small vessels may steer S. by E.  $\frac{1}{2}$  E. for the anchorage in 4 or 5 fathoms, and anchor with the Mouille light bearing about N.W. by N.

Ships bound for Table Bay from the northward must not take too great liberty with Robben Island on account of its light, for the island is low, and the dangerous Whale Rock lies S. 17 W., only 1 4-10ths mile from the lighthouse, and 9-10ths of a mile from the nearest point of the island.

Having sighted the Robben Island light, a ship should haul to the S.W., if the light bear anything to the westward of south, until the flashing light on Green Point bears S. by E. or S.S.E., when she may steer for it until Robben Island light bears N.E., when she may steer S.E. by E.; and when Mouille light bears S.S.W. steer, as before directed, for the anchorage.

With the light upon Robben Island and the Green Point or Mouille Point light, a vessel may readily determine her position by cross bearings; but the safest and easiest plan to adopt is, whilst the Green and Mouille lights are open of each other, to tack when the Robben Island bears N. by W.  $\frac{1}{4}$  W., and when they approach each other and become in line to tack when the Robben Island light bears N. by W. This will prevent accidents from the lowness of the Blaauwberg beach and its deceptive appearance at night. Little, if anything, can be lost in thus beating in by giving up the smooth water near the shore, as the constant northerly current that sets out between Robben Island and the main land more than destroys the seeming advantage; added to which, the wind blows with greater violence from the S.E. on the east side of the bay than it does more to

the westward, though not in such sudden and violent gusts.\*

*New Beacon for the Whittle Rock, False Bay.*

A beacon has been erected on a large flat-topped rock near Oatlands Point, which will, in conjunction with the beacon that now stands on the shoulder of the hill beneath Simon's Berg, point out the position of the Whittle Rock. The rock on which the beacon stands lies a few yards from the shore, and 0.85 miles from the Shoulder Beacon. When on the Whittle Rock the two beacons will be in a line, and also in line with a large patch of whitewashed rocks on the hill northward of Simon's Tower, bearing N.N.W.  $\frac{2}{3}$  W. The shoulder beacon is white, with a staff and ball. The Oatlands Port beacon is triangular, 35 feet high, and painted white with a red band in the centre.

The advantage of this beacon is that it points out to ships from the westward that they are clear of the White Rock, whilst it is kept open to the eastward of the Shoulder Beacon. This was somewhat difficult with the patch of whitewashed rocks behind Simon's Town for a mark, as vessels were obliged to run far to the eastward before the patch opened out clear of the shoulder of Simon's Berg hill.

Vessels from the eastward will still find the white patch of rocks serviceable for pointing out the position of the Whittle Rock.

Admiralty Surveyor.

\* Vessels entering Table Bay during the day when blowing hard from S.E. after passing the Mouille Point, may, with great advantage, anchor in 10 or 12 fathoms, where they will be in a good position for dropping into the inner anchorage on the following morning, as the wind invariably falls light during the night, although the S.E. may continue to blow hard on the East side of the Bay. By observing this rule, more particularly in ships of large tonnage, a great deal of anxiety and risk in wearing ship, when missing stays will be avoided, and less casualties occur from loss of anchors and cables when endeavouring to bring up on the Eastern shore.
