

THE

ZEALAND NEW GAZETTE.

Published by Authority.

WELLINGTON, THURSDAY, MARCH 17, 1870.

G. F. BOWEN, Governor. PROCLAMATION.

WHEREAS by "The Weights and Measures Act, 1868," it is enacted that it shall be lawful for the Governor from time to time to appoint one Inspector of Weights and Measures for any Province, County, Borough, or District, or for each of two or more divisions of any Province, County, Borough, or District, the boundaries of which divisions shall be proclaimed from time to time in the New Zealand Gazette by the Governor: And whereas it is expedient that an Inspector should be appointed for the division of the Province of Auck-land the boundaries whereof are set forth in the Schedule hereto, and that the boundaries of such division should be proclaimed :

Now therefore, I, Sir George Ferguson Bowen, G.C.M.G., Governor of New Zealand, in exercise and pursuance of the power and authority conferred on me by the said Act, do hereby proclaim and declare that for the purposes of the said Act there shall be within the said Province of Auckland a division or district, the boundaries whereof shall be the boundaries set forth in the Schedule hereto.

SCHEDULE.

All that portion of the Province of Auckland known as the Hauraki Gold Field.

Given under the hand of His Excellency Sir George Ferguson Bowen, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief in and over Her Majesty's Colony of New Zealand and its Dependencies, and Vice-Admiral of the same; and issued under the Seal of the said Colony, at Wellington, this sixteenth day of March, in the year of our Lord one thousand eight hundred and seventy.

W. GISBORNE.

GOD SAVE THE QUEEN!

Colonial Secretary's Office, Wellington, 16th March, 1870. T is hereby notified, that Writs issued for the election of Members of the Provincial Council of the Province of Marlborough have been returned with Certificates to the effect that,

For the District of Pelorus,

- Joshua Rutland, of Pelorus Valley, freeholder; and George E. Levien, of Havelock, freeholder:
- For the District of Upper Wairau, Cyrus Goulter, of Hawkesbury, freeholder; and Alexander Binning Monro, of Valleyfield, freeholder :

For the District of Clarence,

- Henry Anthony Ingles, of Kincaid, freeholder; and Walter Gibson, of Waipapa, leaseholder:
- For the District of Awatere, James Edmund Hodson, of Wairau, leaseholder; and Phillip Roderick McRae, of Awatere, freeholder.

For the District of Tua Marina, William Douglas Hall Baillie, of Picton, free-holder; and George Dodson, of Wairau West, freeholder and leaseholder :

For the District of Town of Picton,

John Octavius Western, of Picton, freeholder; Edward Tennyson Conolly, of Picton, householder and freeholder; and Arthur Penrose Seymour, of Picton, freeholder :

For the District of Queen Charlotte Sound, Charles Henry Turner, of Queen Charlotte Sound, leaseholder:

For the District of Wairau Valley, Thomas Carter, of Hillersden, freeholder; and Joseph Ward, of Brookby, freeholder:

For the District of Town of Blenheim, John Tucker Robinson, of Blenheim, freeholder; and William Blick, of Lower Wairau, freeholder :

For the District of Lower Wairau,

William Henry Eyes, of Lower Wairau, free-holder; and James Sinclair, of Blenheim, freeholder :

have been duly elected.

W. GISBORNE.

Colonial Secretary's Office,

Wellington, 16th March, 1870. THE following Report by Captain Young, 18th R.I., Acting Military Secretary, on the progress of the works at the Fort in course of erection at Newcastle, Waikato, is published for general information.

W. GISBORNE.

Newcastle, Waikato, New Zealand, 25th January, 1870.

SIR,—The completion of the fort at Newcastle—for the construction of which I received your Excellency's commands—having been at this time arrested by the temporary removal of the Armed Constabulary on active service, I deem it a fitting time to report upon its progress, and on the amount of labour produced by the men here employed since its commencement.

From the report in detail which I have the honor herewith to lay before your Excellency, it will be seen that the earth-work is within a few days of completion; that the bricks required for the tower have been made on the spot; that lime has been for the first time produced in the district; and that the foundations of the tower have been laid.

I may remark, that the number of men at our disposal was inadequate throughout to the numerous different branches of work going on at the same time, viz., earth-work, lime-burning, brick-making, fuel-cutting, bricklaying, felling, sawing, and carpentering. Some time, moreover, was spent in instruction, and in converting unskilled to skilled labour.

Many local obstructions also caused loss of time. Want of tools and of water-carriage threw us back much at first. Little could be purchased on the spot; all plant wanted had to be made by ourselves, or ordered from Auckland. I endeavoured to enforce the greatest economy, and allowed nothing to be purchased that could be made, repaired, or converted by our own labour. The lime had to be brought on packhorses down a frightful road, from the summit of the Raglan ranges to the Waipa River. The timber —obtained up the Waipa, from a creek two miles off—was very scarce, and had to be carried great distances to the water; and the creek would sometimes remain for weeks too low for passage of canoes. The heavy floods of December—greater than had occurred for years—washed away our store of firewood, and spoilt a large kiln of lime, the work of a fortnight.

Of such a character were our difficulties,---difficulties which I could not have overcome had I not found zeal and good-humoured perseverance in my fellow-workers.

But, apart from their labours, I trust that it may be considered that they have rendered some equivalent for their services, in having, to a certain extent, developed the resources of the country,—by utilizing, for the first time, the brick-clay of Newcastle, and by producing in the district lime for building purposes,—a product never before obtained in Waikato.

The employment of the local forces in the construction of works of a permanent character is a novel experiment; and, it having fallen to me to aid in it, I cannot refrain from expressing my conviction, that the experiment must prove a true economy, and entirely successful. All history, from that of the Romans in Britain downwards, points to a defensive character of warfare as the sure mode of overawing and subduing barbarous nations. A fort is a sleepless sentry, ever upon post—a source of confidence and security to all around it. And a system of strong posts is right economy; for each post, since it permits of a reduction of armed force with safety, is equivalent to the services of so many men under arms. The commander who neglects to fortify cannot be said to hold a country en permanence; he moves through it, making no more impression on it than a whale does in swimming through the ocean; he neutralizes half his strength by being compelled to make large detachments; and, when he does want

to strike a decisive blow, finds that he cannot with safety concentrate more than half his force. Your Excellency will, I trust, pardon these expressions of opinion on my part. I am but quoting the most generally received modern military ideas.

Before concluding, I trust that your Excellency will permit me to acknowledge the courteous support which has been always given to me by Lieut.-Colonel Moule, Commanding the Waikato District.

I feel bound to bring to your Excellency's notice the able assistance which I have derived from Sub-Inspector Kenny, A.C., during the work. I consider that his technical ability would well qualify him to be employed in the superintendence of any future works of a similar character to that in which we have been engaged together.

I hope your Excellency will also allow me to thank, in official form, Sergeant W. Ryland, Wairoa Militia, and Corporal H. W. Willoughby, A.C., successively my assistants in general charge of the work,—for their zealous co-operation.

Finally, I ask your Excellency to let me acknowledge my gratitude to the Non-commissioned Officers and Constables of the detachment, Armed Constabulary, engaged in the work, for their steady conduct, personal good-will towards myself, untiring perseverance, and the hearty zeal which they have shown throughout our labours.

As an officer of the last regiment of Her Majesty's troops ever likely to unfurl its colours in the Colony, and now quitting its shores for ever, I am bound to express my sincere thanks to your Excellency for having offered to me, and to His Royal Highness the Field Marshal Commanding-in-Chief for having permitted me to accept, a position that has enabled me to show some active sympathy with our fellowcountrymen in New Zealand.

I have, &c.,

H. W. Young,

Captain, 2nd Batt. 18th Royal Irish, Acting Military Secretary.

His Excellency

Sir George F. Bowen, G.C.M.G., &c., &c.

Report on the Fort and Tower at Newcastle, Waikato, New Zealand.

In reporting on the present state of the Fort and Tower at Newcastle, I propose to compare the work done, and material produced, with the labour and expenditure, in such a manner as to give some approximation to the value of the military labour, as bestowed, up to the present point, upon that work.

I. The Fort.—The parapet in the main work has been carried up to its full height (9 feet), loopholed and finished, with its banquettes, on rather more than three sides. On the unfinished portion of the remaining side—namely, one face, one flank, and a curtain—the banquettes have been put in, and the parapet itself is 7 feet high, only requiring the loopholes to complete it to its full height.

The ravelin (outwork covering the gate) has been raised to half its full height. It has been left until the main work be finished, the latter being of more importance. A party of twenty men could easily finish the whole of the earth-work in four or five days, provided the loopholes be at hand. The scarcity of timber has constantly thrown the supply of loopholes back, and thereby obstructed the progress of the fort.

cannot be said to hold a country en permanence; he moves through it, making no more impression on it than a whale does in swimming through the ocean; he neutralizes half his strength by being compelled to make large detachments; and, when he does want

One hundred loopholes have been constructed, and | all but six of these built in, leaving twenty-two still to be made. Each loophole averages 32 feet of timber. They are made of $1\frac{1}{4}$ inch rimu or kauri, strengthened with cross-battens, and well coated with tar.

With respect to the ditch, a step, 3 feet broad, has been for the present left between it and the parapet. The treacherous nature of the pumice soil demanded this, and events have proved the justice of the precaution—the late heavy rains having made great havoc even with the step. Had the whole ditch been cut out at once at first, the slightest slip of the soil below would have removed the support of the parapet, portions of which might ere now have toppled down into the ditch.* On one face of the work, the step alluded to has been cut away, and the sides of the ditch sodded. With this precaution it stands well. I must point out, however, that in such a soil as this, the sodding of the ditches will be an absolute necessity for the permanency of the work.

The banquettes of the fort have been made throughout with "punga" or tree-fern stems, placed side by side,—a very strong and durable revetment. There were 1,200 of these used in the work. The labour of cutting these out of the bush, and bringing them by canoe a distance of two miles down a snaggy creek, was considerable. II. The Tower.—The delay in finding lime, and

the spoiling by wet of the first kiln burnt, has much delayed the progress of the central tower. The foundation, however, has been finished, nearly, expending 6,000 bricks and 30 bushels of lime; but there being now 18,000 bricks and 40 bushels of lime on hand, there is nothing to prevent the wall

from being rapidly run up on return of the workmen. The total number of bricks for the tower will be 34,000, and the quantity of lime needed will be 170 bushels. There remain yet wanting, therefore, 10,000 bricks and 100 bushels of lime, a work of little time to obtain, now that all is organized to produce both in large quantities.

For the interior fittings of the tower, a larger quantity of sawn timber than at first decided will be required. Owing to the comparative difficulty of obtaining lime, an alteration (the only alteration) has been made from the original plan of construction presented to His Excellency the Governor in the Report of the 21st September ultimo. I have directed the internal divisions of the tower to be made of wood, with the exception of the lock-up, which will be a brick building.

III.—The well in the centre of the tower has been sunk, and, a stout curb having been put in, it has been carefully steened with well-bricks, moulded specially for this purpose. It requires nothing but the grouting-in of the upper course of bricks to complete it.

For the bridges, the timber is here, but not yet put together. The inner bridge alone will be needed as a drawbridge, the outer one-that leading into the ravelin-being of the simpler ordinary construction.

Fence.—It was found necessary to enclose the neck of land upon which the fort stands,—between the Waipa River and a gully running into it. A stout fence, nine chains long, has therefore been put up there.

IV. Brick-making.—The clay-bed, of which I reported the existence, has, upon being worked, fully

answered expectation, being pure malm of superior character, yielding a brick of a bright red colour, clear metallic ring, and tough quality. This valuable bed lies on the river-bank, between the fort and the Waipa. Though apparently an isolated deposit, it is of considerable extent and thickness, running into the bank to eight or ten feet above the ordinary river-level. It has been found necessary, after working out the surface clay, to remove, as the excavation proceeded, the "encallow," or superincumbent soil, which consists of patches of gravel underlying pumice sand. This has been effected by a short double tramway, with tip-waggons, the soil being shot into the river.

It is suggested that this brick-field and its plant might be economically retained to supply all the bricks that may hereafter be required for other Government works in the district.* The judicious removal of the river-bank, as the clay is worked out, will have the effect of more completely opening out the river to view from the fort.

Upon completion of the tower, it might be partially used as a gaol; and prison labour could then be fitly employed upon the brick-field within the Fort Reserve.

The number of bricks burnt, up to the present time, has been 24,000, in two kilns of 11,000 and 13,000 respectively. A third small kiln will be required to complete the tower.

A large iron-roofed brick-shed, 66 feet by 20, has been erected. A complete plant for double moulding has been constructed, including tables, barrows, and moulds for well, arch, plinth, and ordinary bricks.

V. Lime.—The procuring of lime has presented great difficulty. No lime has ever been made in Waikato before. When required, it has been obtained from Auckland and Waikato Heads (shell-lime), or from Papakura (stone-lime).

It was mentioned to me, however, by Mr. T. B. Hill, of Auckland, that he had observed limestone cropping out on the summit of the Raglan ranges, about two miles from the Waipa River, above Whatawhata.

Upon examining that locality I found, upon the Toke-hau-hau track to Raglan, stone of a very good quality, which, upon analysis, tyielded ninety per cent. pure carbonate of lime. Its exact position is opposite Section 76 of the Karamu Block; but there are indications which lead me to believe that lime will hereafter be found at numerous points in the ranges on the left bank of the Waipa. At Karikari, lower down, I found an impure limestone within 200 yards of the river, on one of the secondary hills of the same ranges.[‡]

Lime-kilns have been constructed at the point above indicated. There is plenty of timber at hand ready for fuel, felled some years ago, when the Government cleared the Toke-hau-hau route. The lime is burnt on the spot, and is carried down to the Waipa on the Constabulary pack-horses; from Tui-karamea, on the Waipa, it is sent by steamer to Newcastle.

We have been supplied, up to the present time, with seventy bushels. It is very strong, five bushels going to the 1,000 bricks; and, as compared with shell-lime, at ten bushels to the 1,000 bricks, is worth at least 4s. 6d. per bushel delivered here.

VI. Labour.-From the 14th August ultimo, until the 23rd August, the labour for the work was given

* The hospital at Newcastle, an extensive and solidly con-structed two-storey wooden building, is destitute of a single chimney at present. + Captain Hutton, Mr. T. B. Hill.

The existence of this limestone is an additional reason in favour of completing, as soon as possible, the communication between Raglan and the Waikato.

^{*} To give an idea of the light nature of the subsoil, it may be Newcastle, becoming surcharged with water, brok its wamp near Newcastle, becoming surcharged with water, broke its way to the Waipa River, forming, in two days, a gully 20 feet deep, 30 feet broad, and 200 yards in length.

by the Wairoa Militia and Pokeno Rangers Volunteers. After the latter date, their place was supplied by a detachment of Armed Constabulary, under Sub-Inspector Kenny. I obtained, however, special authority to retain, as brickmakers and bricklayers, one non-commissioned officer and four privates of the first-named corps. On the 14th of this month the work ceased, and the whole were ordered to Cambridge.

The number of days' work given has been 104, but a deduction must be made from this for wet weather. The men have been employed five working days, of six and a half hours during each week; and the average daily number of working hands has been twenty-four.

VII. Expenditure.—The amount of local expenditure for tools, &c., has been £52 15s. 2d.;* but this sum does not include the charge for conveyance of lime by steamer, the amount of which I am unable at this present time to furnish.

VIII. Materials, Plant, and Labour Value.—(See Appendix.)—It will be seen from the appended statement, that the market value of the bricks and other material produced has been £209 16s. 6d.; that the value of plant and buildings erected amounts to £36 18s.; and that bricklaying and carpentry have been done to the value, at current rates, of £20 16s. 6d. A very large quantity of earthwork building and excavation has also of course been done—in fact this has been the greatest portion of the work; but it is not possible exactly to appraise the value of this kind of work, and I have therefore not alluded to it.

The total value of work, apart from this, effected by the labour of the Armed Constabulary, amounts, according to the sum of the three items above mentioned, to $\pounds 267$ 9s.

However inadequate such a sum may seem, compared with the value of contract labour, it cannot but be looked upon as clear gain to the Government; for the men were taking their guard and other military duties, and were not a whit less efficient in them because otherwise employed during fatiguehours. I believe that they were happier and healtbier for the moderate labour which they were called upon to perform, and it no doubt saved them from much of the listless *ennui* which is the lot of small posts and detachments. H. W. Young, Capt.,

18th Royal Irish,

Acting Military Secretary.

NOTE.—The allotments marked with an asterisk * attached will be put up at a price compounded of the value stated in the Schedule and the value of certain improvements thereon respectively, to be made known at the time of sale, or ascer-tained on application to Major Noake. Those sections in brackets will be put up together.

Terms of payment :--- One-tenth of the purchase money in cash on the fall of the hammer, the remainder at or before the expiration of one calendar month from the day of sale.

The River Patea is about thirty-five miles northwest of Wanganui. It is accessible to coasting craft and small steamers, and navigable for vessels drawing six feet, for fifteen or twenty miles. It is likely to become the place of trade of the Ngati-ruanui country, one of the finest agricultural districts in the Colony; and, although no land has yet been sold, the township already contains a considerable population.

Plans may be inspected at the Office of the Secre-tary for Crown Lands, Wellington, and at the Offices of the Commissioners of Crown Land, throughout the Colony; at the Resident Magistrate's Court House, Carlyle; and at the Custom Houses Wanganui.

Regulations for the sale of these lands may be seen in the New Zealand Gazette, of 17th February, 1868.

Colonial Secretary's Office, Wellington, 16th March, 1870. IS Excellency the Governor has been pleased to issue Letters of Naturalization, under "The Aliens Act, 1866," in favour of the under-mentioned persons, viz. :-
