SOUTH ENTRANCE, MORETON BAY.

MASTERS of Vessels using this Passage are cautioned that the depth of water on the Bar has decreased from 15 feet to 13 feet 6 inches at low-water springs.

To insure carrying this depth, the Bar should be crossed with the rocky knoll on the beach westward of Point Lookout almost in line with the centre hummock of the triple hill at the back, instead of midway between the two western hummocks, as previously directed; the north break being at the same time on with Mount Tempest. After crossing the Bar, the inshore end of the north break should be steered for until the deep-water channel is reached, when a course should be steered so as to insure being to the northward of the line of beacons before rounding the south spit.
