The deaths of persons not residents of the boroughs, occurring at hospitals, have been excluded in all cases.

The total births in the above boroughs amounted to 443, against 432 in July, an increase of 11. The deaths in August were 166, an increase of 10 on the number in July. Of the total deaths, males contributed 96; females, 70. Forty-four of the deaths were of children under 5 years of age, being 26.51 per cent. of the whole number; 30 of these were under 1 year of age.

† The information necessary for calculating the population has not yet been obtained from the Town Clerk.

‡ It must be understood that the numbers of the population above given refer only to those within the several borough boundaries. To estimate the relative importance of the principal boroughs as centres of population it is necessary in each case to take into consideration the number of the population in the adjacent boroughs, some of which are included in the above table, and other districts which are practically suburbs of the central borough. This can only be done with any degree of accuracy for census years.

The populations of the four principal boroughs and their suburbs in 1886 were as follows:—

Auckland Borough .. .. .	33,161	Christchurch Borough .. .. .	15,265
Adjacent boroughs and road districts .. .. .	23,887	Adjacent boroughs and other suburbs .. .. .	29,423
Total Auckland Borough and suburbs .. .. .	57,048	Total Christchurch Borough and suburbs .. .. .	44,688

Suburbs .. .. .	1,888	Adjacent boroughs .. .. .	22,275
Total Wellington Borough and suburbs .. .. .	27,833	Total Dunedin Borough and suburbs .. .. .	45,518

The population of Invercargill and suburbs at same date was—

Invercargill Borough .. .. .	5,212
Adjacent boroughs .. .. .	3,727
Total Invercargill Borough and suburbs .. .. .	8,939

The following Table shows the Causes of the Deaths of Persons of both Sexes under 5 Years of Age and 5 Years and upwards, and the Proportions per Cent. of Deaths from each Cause, in the Boroughs of Auckland, Wellington, Christchurch, and Dunedin, that were registered during the Month of August, 1889.

The following remarks apply only to the four principal boroughs:—

The births in August were 224, against 217 in July, an increase of 7.

The deaths amounted to 77, against 90 in July.

There were 11 deaths of persons of 65 years and upwards: 4 males of 77, 76, 70, and 67, and 2 females of 90 and 85, died at Auckland; a male of 74 and a female of 72 at Wellington; a male of 76 and a female of 79 at Christchurch; and a female of 65 at Dunedin.

*Specific Febrile or Zymotic Diseases.*—The deaths in this class increased in number from 6 in July to 9 in August, the difference being chiefly caused by an increase in the number of deaths from typhoid fever in Wellington, from 1 in July to 3 in August. There were not any deaths from this disease in either of the other three boroughs. Three deaths occurred in each month from diphtheria. In July all 3 occurred in Wellington; in August there was 1 in Wellington, 1 in Christchurch, and 1 in Dunedin.

*Constitutional Diseases.*—These diseases caused 12 deaths in August, against 13 in July. There were 5 deaths from cancer in July, but not any in August. The deaths, however, from phthisis increased in number from 3 in July to 8 in the past month; of which 4 occurred in Dunedin, and 2 in Auckland.

*Local Diseases.*—There was a decrease in the number of deaths in this class, from 52 in July to 42 in August. Diseases of the nervous system caused a much greater mortality, the deaths having increased in number from 7 to 13; but diseases of the circulatory system, heart disease, &c., only caused 3 deaths in August, against 10 in July. There was also a considerable decrease in the mortality from diseases of the digestive system, from 9 deaths in July to 4 in August.

*Violent Deaths.*—There were 4 deaths in this class. The deaths of 2 persons were attributed to accident, one of whom was injured by a railway-truck; 2 persons committed suicide.

The subjoined table shows the mortality for the last two months at each of these four boroughs from six principal specific febrile or zymotic diseases, and also the deaths from certain inflammatory diseases of the lungs. These causes of death have been distinguished from the others of the classes to which they belong as being the most important special diseases which give rise to sudden increases in the death-rates of towns, and the prevalence of which is closely connected with sanitary condition and climatic influence of the season on health.
