Totals	406	16	7	70	14	8	74	184	

The deaths of persons not residents of the boroughs, occurring at hospitals, have been excluded in all cases.

The total births in the above boroughs amounted to 406, against 388 in May, an increase of 18. The deaths in June were 184, a decrease of 20 on the number in May. Of the total deaths, males contributed 93; females, 91. Forty of the deaths were of children under 5 years of age, being 21.74 per cent. of the whole number; 30 of these were under 1 year of age.

* It must be understood that the numbers of the population above given refer only to those within the several borough boundaries. To estimate the relative importance of the principal boroughs as centres of population it is necessary in each case to take into consideration the number of the population in the adjacent boroughs, some of which are included in the above table, and other districts which are practically suburbs of the central borough. This can only be done with any degree of accuracy for census years.

The populations of the four principal boroughs and their suburbs in 1886 were as follows:—

Auckland Borough	33,161	Christchurch Borough	15,265
Adjacent boroughs and road districts	23,887	Adjacent boroughs and other suburbs	20,423
Total Auckland Borough and suburbs	57,048	Total Christchurch Borough and suburbs	44,688
Wellington Borough	25,945	Dunedin Borough	23,243
Suburbs	1,888	Adjacent boroughs	22,275
Total Wellington Borough and suburbs	27,833	Total Dunedin Borough and suburbs	45,518

The population of Invercargill and suburbs at same date was—

Invercargill Borough	5,212
Adjacent boroughs	3,727
Total Invercargill Borough and suburbs	8,939

THE following Table shows the Causes of the Deaths of Persons of both Sexes under 5 Years of Age and 5 Years and upwards, and the Proportions per Cent. of Deaths from each Cause, in the Boroughs of Auckland, Wellington, Christchurch, and Dunedin, that were registered during the Month of June, 1890.

The following remarks apply only to the four principal boroughs:—

The births in June were 238, against 211 in May, an increase of 27.

The deaths amounted to 112, against 123 in May.

There were 16 deaths of persons of 65 years and upwards: 4 males of 84, 75, and 67 (2), and 4 females of 75, 71 (2), and 70, died at Auckland; 2 males of 75 and 69, and 2 females of 80 and 77, at Wellington; 1 male of 82 at Christchurch; and 3 males of 80, 69, and 68 at Dunedin.

Specific Febrile or Zymotic Diseases.—There was an increase in the number of deaths in this class from 17 in May to 20 in June. Scarlet fever and scarlatina caused 3 deaths in June, of which 2 occurred in Wellington, but not any in May. Typhoid fever was more fatal, having caused 11 deaths, against 7 in the previous month. Of those in June, 4 occurred in Wellington, 5 in Dunedin, and 2 in Auckland. Influenza and catarrh caused each 1 death in Auckland; but diphtheria, which was fatal in 2 cases in May, did not cause any death in June. There were only 2 deaths from diarrhoeal diseases in June, against 5 in May.

Dietetic Diseases.—Three deaths occurred resulting from alcoholic intemperance; 1 was of a man only 31 years of age.

Constitutional Diseases.—The mortality from these diseases was somewhat less in June (25 deaths) than in May (28 deaths). Cancer caused 8 deaths in the last month, against 7 in May. The deaths from phthisis were the same in number (14) in each month.

Local Diseases.—These diseases caused 53 deaths in June, a decrease of 8 on the number in May. Diseases of the nervous system caused 7 deaths, against 13 in the previous month. There was a slight increase, from 12 to 13, in the number of deaths from diseases of the circulatory system; and a slight decrease, from 19 to 18, in the number from diseases of the respiratory system. Of these last, the deaths from bronchitis were less numerous in June by 2, and those from pneumonia were more numerous by 2.

Violent Deaths.—There were only 2 deaths thus classified; 1 was that of a female, found drowned in Wellington Harbour.

The subjoined table shows the mortality for the last two months at each of these four boroughs from six principal specific febrile or zymotic diseases, and also the deaths from certain inflammatory diseases of the lungs. These causes of death have been distinguished from the others of the classes to which they belong as being the most important special diseases which give rise to sudden increases in the death-rates of towns, and the prevalence of which is closely connected with sanitary condition and climatic influence of the season on health.
