*CORAL REEF IN TRACK OF VESSELS FROM ROEBUCK BAY OR DERBY TO WYNDHAM AND PORT DARWIN. (Hydrographic Notice No. 5.)*

"Orlando," at Melbourne, 19th June, 1891.

JAMIESON REEF.—Owing to information given by Captain R. Jamieson, of the Adelaide Steamship Company's vessel "Otway," a coral reef has been found by H.M.S. "Penguin" in the track of vessels bound from Roebuck Bay or Derby to Wyndham and Port Darwin.

This reef is two and a quarter miles long north and south, and one mile broad east and west. It is mostly covered at all times of tide with from 12ft. to 24ft. water, but there is one small part three-quarters of a mile from the north end of the reef which dries 5ft. at low-water spring-tide. This spot is in lat. 14° 4' 32" S., long. 125° 21' 11" E. From it the centre of the flat-topped summit of Condillac bears S. 78° E., distant twelve miles and two-tenths.

The water in this locality is much discoloured at all times, and there is nothing in the appearance of the sea over the reef to indicate danger, except at nearly low-water, when the shallowest part breaks. The lead gives no warning.

These sections, together with those in Block XII., Makuri, and Block I., Puketoi, now being offered under "The Land Act, 1887," comprise about 3,686 acres, and are part of the South-west Puketoi Block, which is situated south-east of the Township of Pahiatua, and adjoining the Tiraumea-Makuri and Mangaone-Tiraumea Blocks. The access to the sections on the north is by way of the Tiraumea and Toritea Roads, and to the southern sections by way of the Hawera and Tane Roads. The land is covered with forest, including tawa, rata, hinau, rimu, mahoe, konini, rangiora, with rata, &c., and occasional totara trees. The soil is good throughout, the formation being limestone or papa. Mount Marchant is a limestone hill, and the limestone crops out on most of the sections in that vicinity. The sections are watered by small streams, and it is probable that permanent water can be obtained on the high limestone hills from springs and creeks. The following remarks apply only to the four principal boroughs: The births in June were 224, against 212 in May, an increase of 12. The deaths amounted to 111, against 93 in May. There were 21 deaths of persons of 65 years and upwards: 3 males of 97, 79 and 65, and 3 females of 82, 78, and 72, died at Auckland; 6 males of 85, 78, 75, 72, 71, and 69, and a female of 79, at Wellington; 2 males of 66 and 65 at Christchurch; 4 males of 80, 72 (2), and 69, and 2 females of 92 and 65, at Dunedin.

*Specific Febrile or Zymotic Diseases.*—There were 15 deaths from these diseases in June, against 21 in May. Whooping-cough was again prevalent in Dunedin, the deaths from that cause having numbered 6 in June and 3 in May; 2 deaths from this disease also occurred in Auckland in the past month. Diarrhoea caused 4 deaths in June, against 10 in May.

*Constitutional Diseases.*—These diseases caused 18 deaths in June, a decrease of 4 on the number in the previous month. There was a decrease in the number of deaths from cancer from 6 to 2, but phthisis was more fatal in June, having caused 11 deaths, against 9 in May.

*Local Diseases.*—The mortality from these diseases amounted to 50 deaths in May and 65 in June, the increase being due to the greater mortality from diseases of the circulatory system, an increase from 7 deaths to 14, and from diseases of the respiratory system, an increase from 14 deaths to 24. Bronchitis, with a death-toll of 7, was the most fatal among the diseases of the respiratory system. Pneumonia came next with 6 deaths. Diseases of the digestive system caused 6 deaths in June, against 7 in May, but of those in June ulcer of the stomach caused 3, no death from that disease having occurred in the previous month.

*Violent Deaths.*—The only deaths recorded in this class were of 2 infants from injuries at birth.

The subjoined table shows the mortality for the last two months at each of these four boroughs from six principal specific febrile or zymotic diseases, and also the deaths from certain inflammatory diseases of the lungs. These causes of death have been distinguished from the others of the classes to which they belong as being the most important special diseases which give rise to sudden increases in the death-rates of towns, and the prevalence of which is closely connected with sanitary condition and climatic influence of the season on health.
