The date of acceptance of each application is given after the number.

Notice of Request to amend Specification.

Patent Office,
Wellington, 4th August, 1896.

A REQUEST for leave to amend the specification (including drawings) relating to the under-mentioned application for Letters Patent has been received, and is open to public inspection at this office. Any person may, at any time within one month from the date of this *Gazette*, give me notice in writing of opposition to the amendments. Such notice must set forth the particular grounds of objection, and be in duplicate. A fee of 10s. is payable thereon:—

No. 8342.—6th March, 1896.—FRANK VICTOR RAYMOND, Solicitor, and ARTHUR EDWARD OTWAY, Commercial Traveller, both of Invercargill, New Zealand. An invention entitled "The Adjustable Folding Cabin-table."

The nature of the proposed amendments is as follows, viz.:—

1. To insert immediately after line 18, page 2, the following paragraph: "An alternative construction of the table for fixing to the wall on the side of the berth is shown in diagram 5, wherein K is a plate by which the table is fastened to the wall. This plate, as will be well understood, may work in a guide as before described. L is a joint connecting the plate with a bar M. The joint is shown in the plans. The bar M passes through two lugs o underneath the table, these acting as bearings for the bar. The bar is circular, so that the table may be revolved to any position, and is provided with a fixed serrated washer N, and opposite and acting in unison with this is another serrated washer P, fixed to the table. The other end of rod M is screwed, on which is arranged to work a thumb-screw R for fastening the table-top by pressing it against the serrated washer P."

2. To insert immediately after line 9, page 3, the following words, &c.: "When the table shown in figure 5 is to be used, bar M is lowered upon the stop, and the table-top fastened by the thumb-screw R at any required slope. To fold the table this operation is reversed. Where the plate K is fixed to the wall, so that the table folds parallel with the berth, the bar M is pulled to the required position, and the table-top rotated to the desired angle, and fastened thereat by means of the thumb-screw R."

3. To add four figures to the drawings.

The applicants state, "Our reason for such amendment is to provide for the construction of the table in the alternative mode, and to insure further protection for our said invention."
