SUMMARY FOR JUNE, 1910.

THE rainfall was, as usual in the month of June, higher in the North Island than in the South Island, but was over the average in most parts of the North Island and the northern districts of the South Island, but below the mean for the month in South Canterbury and Central Otago. Rainfall was excessive on the West Coast of the South Island.

The weather was on the whole very changeable and stormy at times. Northerly winds and very humid weather prevailed until the 9th, when the barometer went very low in the south, and was unsteady until the 15th. Heavy snow-storms then occurred in the South Island and on higher levels in the north. Snow fell also on the 16th, 17th, and 18th. High pressure followed, but gave way to another low-pressure area of small intensity on the 21st. A smart rise in barometric pressure took place on the 23rd, but a rapid fall succeeded on the 25th and 26th, and the month closed with stormy weather.

Meteorological Office, Wellington.

\* These remaining suburbs do not lie within borough boundaries, and particulars respecting them have not been obtained for the Vital Statistics. Closely correct annual statements of population outside boroughs are not obtainable.

In the above table are given the deaths and death-rates for each of the four cities, for the suburban boroughs severally, and for each city with its suburban towns. As regards Auckland and Christchurch, the whole of the area usually recognised as suburban has not yet been brought under municipal government, and the vital statistics do not deal with such portions as still remain in road districts. But the omission is not very important, for there are in either case quite enough suburbs included within borough boundaries to give a fair idea of the death-rate of Greater Auckland and Greater Christchurch. As further boroughs are formed the vital statistics will be made to include them.

Deaths occurring at hospitals, of persons not residents of the borough wherein the hospital is situated, have been allotted in each case to the borough where the disease was contracted, and not to that in which the death actually took place.

The inclusion of the suburban boroughs tends to lower the rate at each of the four cities.

	Death-rates per 1,000 of Population.	
Auckland City .. .. .	0.99	
and seven suburban boroughs .. .. .		0.86
Wellington City .. .. .	0.91	
and three suburban boroughs .. .. .		0.90
Christchurch City .. .. .	0.88	
and three suburban boroughs .. .. .		0.87
Dunedin City .. .. .	1.21	
and six suburban boroughs .. .. .		1.01

Including the suburbs, the rate at Dunedin is the highest, and at Auckland the lowest.

Compared with June, 1909, the results are,—

	1909.	1910.
Auckland and suburbs .. .. .	0.86	0.86
Wellington and suburbs .. .. .	0.76	0.90
Christchurch and suburbs .. .. .	0.80	0.87
Dunedin and suburbs .. .. .	0.83	1.01

The total births in the above boroughs amounted to 614, against 583 in April—an increase of 31. The deaths in June were 255—an increase of 51 on the number in May. Of the total deaths, males contributed 147, females 108. Forty-eight of the deaths were of children under five years of age, being 18.82 per cent. of the whole number; 37 of these were under one year of age.

There were ninety-five deaths of persons of 65 years and upwards: Thirteen men, 65, 66, 68, 69, 70, 72, 74, 75, 76 (two), 77, 79, 88, and ten women, 66, 68, 76, 79, 80, 82, 83, 84, 86, 90, died at Auckland; nine men, 65, 67, 68, 72 (three), 73 (two), 80, and eleven women, 65, 71, 73 (two), 74, 75 (two), 77, 79, 80, 84, at Wellington; thirteen men, 66 (two), 68, 70, 73, 77, 79 (two), 81, 85, 86 (two), 98, and fourteen women, 65, 72, 73, 75 (two), 77, 79, 81 (two), 82 (two), 83, 84, 86, at Christchurch; and fifteen men, 65, 69, 71, 72, 73 (two), 75 (two), 77, 79, 80, 82 (two), 84, 85, and ten women, 67, 68, 69, 71, 76, 77 (two), 79 (three), at Dunedin.

**GENERAL DESCRIPTION.**

Kohika No. 2 Settlement is situated on the downs which rise to the eastern slopes of the Hunter's Hills Range. The point where the road crosses the Makikihi River and enters the settlement is about six miles in a north-westerly direction from the railway-station at Makikihi. The latter is on the Main Trunk Railway line, Christchurch to Dunedin, about one hundred and eighteen miles from Christchurch and eighteen miles from the Port of Timaru. The main road leading down the Makikihi Valley is well formed and metalled. The original Kohika Settlement, formerly part of Mr. T. J. Teschmaker's Otaio Estate, which was established in 1901 and is now a prosperous settlement, lies about three-quarters of a mile in a direct line eastward from the Kohika No. 2 Settlement.

The settlement lies at an elevation of about 500 ft. above sea-level. It comprises open undulating arable downs land, intersected by broken watercourse channels and by a creek. The soil is of good quality on clay subsoil. About 49 acres on Section 3 and 41 acres on Section 4 have been ploughed; the remainder of the settlement is all in old cultivated grass pasture, with the exception of the terrace faces, which are in tussock.

A new road has been laid out through the settlement in order to give suitable access to each section, and this road will be constructed by the Government in due course. Provision has also been made for the erection of a light footbridge across the Makikihi River at the entrance to the settlement.

**IMPROVEMENTS.**

The improvements on the sections consist of fencing only, the value of which is included in the prices of the sections. Particulars of the improvements are as follow: Section 1, half-value of 131 chains of boundary-fencing, £40 18s. 9d. Section 2, half-value of 76 chains of boundary-fencing, £12 1s. 9d. Section 3, half-value of 75 chains of boundary-fencing, £12 14s. 3d. Section 4, half-value of 111 chains of boundary-fencing, £34 13s. 9d.
