2. The applicant may, if he thinks fit, forward with the original certificate referred to in paragraph (a) of the said form of application a copy of the said certificate, in which case the original certificate shall be returned to the applicant and the copy shall be filed with the papers relating to the application. 8. The Examiner shall take all reasonable precautions to prevent copying, and shall not allow the candidates to hold any communication with one another during the examination.

9. If any candidate is discovered copying from another or affording any assistance or giving any information to another, or communicating in any way with another candidate during the examination, he shall be deemed to have failed in his examination.

10. If a candidate leaves the examination-room before answering any question he shall not be allowed to answer that question on his return, except with the permission of the Examiner; and the Examiner may, in lieu of granting such permission, substitute another question for the question so unanswered.

11. Perfect silence is to be observed in the examination-room during the progress of the examination.

Any candidate who commits a breach of any of these regulations for which no specific penalty is provided, or who is guilty of any insolent conduct towards the Examiner, or of any other improper or disorderly conduct in or about the examination-room, may, in the discretion of the Board, be deemed to have failed in his examination, or, if he has passed his examination, his certificate may be withheld by the Board for such period as it thinks fit.

13. No candidate who fails in his examination shall be eligible for re-examination for a period of three months after the date of that examination.

14. At the conclusion of any examination under these regulations the Examiner at each examination-centre shall send to the Chief Inspector of Machinery at Wellington all the examination-papers in connection with that examination, and shall also forward a report by him as to the result of the examination so far as it was of an oral or practical nature.

graphs shall be the judge—the latter wires shall be insulated as in clause 7, and suspended if deemed necessary.

9. In places where it may be required to cross with the electric-light wires through any other aerial wires or through cables because of the impracticability of crossing above or below—and crossing above or below shall be done if possible—all such through crossings, if permitted, shall be effected at a pole. In every case of a through crossing, no matter whose property the lines crossed through may be, the method of carrying the electric-light wires across the pole, protecting them thereon, protecting other wires from coming into contact with them, and protecting persons working on the poles from danger of shock shall be to the satisfaction of the Minister of Telegraphs. The electric-light wires shall be insulated with not less than 300-megohms-per-mile grade of vulcanized rubber where they pass through on the poles and over the whole length of the span on each side of the pole crossed through. Where the insulated wires cross through on the pole they shall be encased in some hard protecting substance for the entire length of the arms on such pole. If metal pipe be used to encase the wires it shall be effectively earthed.

10. In running these lines through streets where no telegraph-lines exist, the Corporation shall keep to one side of the street; and in running service wires to the opposite side of the street to that on which their line of poles is placed the Corporation shall arrange to supply so as to interfere as little as possible with the route on that side of the street.

11. Except by permission of the Minister of Telegraphs, all overhead electric-light-pole lines shall be placed on the opposite side of the streets to that on which any telegraph-pole lines exist, and where the erection of the electric-light wires necessitates the alteration of telegraph-wires that may exist when the electric-light wires are being run, and such alteration is practicable, the expense of the alteration shall be borne by the Corporation.

12. Where the electric-light wires are on one side of a street and the telegraph-wires are on the other, and service is required to be given from each to the other side of the street, each party shall give the other reasonable facilities as far as possible to effect supply.

13. Where it cannot be arranged otherwise, and there is room on the telegraph-poles, and other circumstances do not render it unsafe or impracticable, the electric-light wires may be run along on the telegraph-poles, subject to their insulation being not less than 300-megohms-per-mile grade of vulcanized rubber, and to any special conditions that it may be found necessary to impose at the time that the placing of such electric-light wires on the telegraph-poles is being considered.

14. When the electric-light-pole lines are being laid out provision should be made, by increased length of pole, to provide clearance to facilitate crossing with telegraph-service wires to the side of the street occupied by the Corporation's line.

15. Telegraph-wires shall not be run along or placed on the Corporation's poles, nor shall the Corporation's wires be run along or placed on telegraph-poles, without a special understanding of requirements and precautions to be observed being arrived at between a responsible officer of the Corporation and of the Minister of Telegraphs in respect of each case. Rental at a rate to be agreed upon may be charged for the use of poles, but nothing in this license shall be construed to give any party a right to the use of poles other than its own.

16. Every main shall be tested for insulation after having been placed in position and before it is used for the purposes of supply, the testing-pressure being at least 220 volts, and the Corporation shall duly record the results of the tests of each main or section of a main.

17. The insulation of every complete aerial and underground circuit used for the supply of energy, including all machinery, apparatus, and devices forming part of or in connection with such circuit, shall be so maintained that the leakage current shall not under any conditions exceed one-thousandth part of the maximum supply-current. Every leakage shall be remedied without delay. Every such circuit shall be tested for insulation at least once in every week, and the Corporation shall duly record the results of the tests.

18. The sectional area of the conductor in any electric line laid or erected in any street shall not be less than that of a strand of seven wires, each of which is of No. 20 standard wire gauge, and the sectional area of every wire in a strand forming any such conductor shall not be less than that gauge.

19. All material used for insulating electric lines or apparatus shall be of the best quality, and thoroughly durable and efficient, having regard to the conditions of its use. Suitable provision shall be made for the protection of the insulating material against injury or removal. If the protection so provided be wholly or partly metallic, it shall be efficiently connected with earth.

20. All metal pipes or coverings containing any electric wire shall be efficiently connected with earth, and shall be so jointed as to make good electrical connection throughout their whole length.

21. Arc lamps used in any street for public lighting shall be so fixed as not to be in any part at a less height than 10 ft. from the ground. All arc lamps shall be so guarded as to prevent pieces of ignited carbon or broken glass falling from them, and shall not be used in situations where there is any danger of the presence of explosive dust or gas.

22. The variation of pressure at any consumer's terminals shall not, under any conditions of the supply which the consumer is entitled to receive, exceed 4 per cent. from the normal pressure at which he is being supplied.

23. Every aerial line shall be attached to supports at intervals not exceeding 200 ft. where the direction of the line is straight, or 150 ft. where the direction is curved or where the line makes a horizontal angle at the point of support.

24. Every support for an aerial line shall be of a durable material, and properly stayed against forces due to wind-pressure, change of direction of the line, or unequal lengths of span. The factor of safety shall be for all aerial lines and suspending wires, and for all other parts of the structure, at least 6, taking the maximum possible wind-pressure at 20 lb. per square foot. Earth wires, where led down poles, shall be protected by casing for a distance of 8 ft. from the ground.

25. All aerial wires shall be attached to suitable insulators carried on cross-arms of suitable material and cross-section, and they shall be so attached to the insulators or guarded that they cannot fall away from the support. Conductors covered with insulating material shall be so attached that their insulation will not be impaired where they are secured to the insulator.

26. Any aerial wire shall not in any part thereof be at a less height from the ground than 18 ft., or within 5 ft. measured horizontally, or 7 ft. measured vertically, from any part of any building or erection other than a support for the line, except where brought into a building for the purpose of supply. Where the wires cross the railway-line the minimum height of all shall be 18 ft., unless the Railway Department requires a greater height; and the permission of that Department shall be obtained by the Corporation for every such crossing.

27. Service lines from aerial lines shall be led as directly as possible to insulators firmly attached to some portion of the consumer's premises which is not accessible to any person without the use of a ladder or any other special appliance. Every portion of any service line which is outside a building and is within 7 ft. from any part of the building shall be rubber-insulated.

28. Where an aerial line crosses a street, the angle between the line and the direction of the street at the place of crossing shall not be less than 60 degrees, and the spans shall be as short as possible.

29. Where an aerial line crosses or is in proximity to any metallic substance, precautions shall be taken against the possibility of the line coming into contact with the metallic substance, or of the metallic substance coming into contact with the line, by breakage or otherwise.

30. Efficient guard-wires shall be erected in a manner to meet with the approval of the Minister of Telegraphs at all crossings and places where electric-light wires intersect telegraph or other wires, as may be required by the Minister to be so protected. The Corporation shall bear the expense of such guard-wires in all cases where an electric-light wire intersects a telegraph or other wire previously existing.

31. Every aerial line, including its supports, its conductors, and their insulating covering, and all the structural parts and electrical appliances and devices belonging to or connected with the line, shall be duly and efficiently supervised and maintained as regards both electrical and mechanical conditions.

32. An aerial line shall not be permitted to remain erected after it has ceased to be used for the supply of energy unless the Corporation intends within a reasonable time again to take it into use.

33. The electric-light wires may be placed wholly underground or partly underground and partly overhead.

34. All conduits, pipes, casings, and street boxes used as receptacles for electric lines shall be constructed of durable material, and shall be of ample strength to prevent damage from heavy traffic, and reasonable means shall be taken to prevent the accumulation of gas in such receptacles.

35. Where an underground line crosses or is in proximity to any metallic substance, special precautions shall be taken against the possibility of any electrical charging of the metallic substance from the line, or from any metallic conduit, pipe, or casing enclosing the line.

36. All underground metal conduits, pipes, or casings containing an electric line shall be efficiently earthed, and shall be so jointed and connected across all street-boxes and other openings as to make good electrical contact throughout their whole length.

37. The covers of street-boxes shall be so secured that they cannot be opened except by means of a special appliance. Street-boxes shall be inspected from time to time for the presence of gas, and suitable action shall be taken to check its influx and accumulation.

38. The Corporation shall be responsible for all electric lines or wires, fittings, and apparatus belonging to it, or under its control, which may be upon a consumer's premises, being maintained in a safe condition and in all respects fit for supplying energy.

39. In delivering the energy to a consumer's terminals the Corporation shall exercise all due precautions so as to avoid risk of causing fire on the premises.

40. Where medium pressure is supplied to any consumer the following conditions shall be complied with:—

Where the supply is for power purposes—

- (a.) The frame of every electric motor shall be efficiently connected with earth.
- (b.) The consumers' wires forming the connections to motors, or otherwise in connection with the supply, shall be, as far as practicable, completely enclosed in strong metal casing efficiently connected with earth, or they shall be fixed in such a manner that there shall be no danger of any shock.
- (c.) The supply to every motor shall be controlled by means of an efficient cut-off switch, placed in such a position as to be easily handled by the person in charge of the motor, and connected so that by its means all pressure can be cut off from the motor itself, and from any regulating switch, resistance, or other device in connection therewith.
- (d.) Switches, efficient fuses, or other automatic circuit-breakers shall be provided, so as to protect the circuits from excess of current, and all switches and cut-outs shall be so enclosed and protected that there shall be no danger of any shock being obtained in the ordinary handling thereof, or of any fire being caused by their normal or abnormal action.
- (e.) A notice shall be fixed in a conspicuous position at every motor and switchboard in connection with the supply forbidding unauthorized persons to touch the motors or apparatus.

41. Where the supply is for arc lamps in series—

- (a.) The consumer's wires forming the connections to the arc lamps, or otherwise in connection with the supply, shall be, as far as practicable, completely enclosed in strong metal casing efficiently connected with earth, or they shall be fixed in such a manner that there shall be no danger of any shock.
- (b.) The supply to every arc lamp shall be controlled by means of an efficient cut-off switch, placed in such a position as to be easily handled by the person in charge of the arc lighting, and connected so that by its means all pressure can be cut off from the arc lamp itself, and from any regulating switch, resistance, or other device in connection therewith; provided that where the arc lamps are connected in series across the outer conductors of a three-wire system, it shall be sufficient if one such switch be provided for each series of arc lamps.
- (c.) Switches, efficient fuses, or other automatic cut-outs shall be provided, so as to protect the circuits from excess of current, and all switches and cut-outs shall be so enclosed and protected that there shall be no danger of any shock being obtained in the ordinary handling thereof, or of any fire being caused by their normal or abnormal action.

42. Where the three wires of the system are brought into a consumer's premises for lighting purposes the supply shall be given to two pairs of terminals, arranged in such a manner that there shall be no danger of any shock to persons, and the wiring from those terminals shall be kept distinct.

43. Where any portion of any electric line, or any support for an electric line, is exposed in such a position as to be liable to cause injury from lighting, it shall be efficiently protected against such liability.

44. A suitable safety fuse or other automatic circuit-breaker shall be inserted in each service line within a

consumer's premises, as close as possible to the point of entry, and contained within a suitable locked or sealed receptacle of fireproof construction, but no fuse or automatic circuit-breaker shall be inserted in the intermediate conductor of the three-wire system.

45. All electric wires placed on a consumer's premises shall be highly insulated, and shall be thoroughly protected against injury to the insulation or access of moisture. All electric wires shall be so fixed and protected as to prevent the possibility of electrical discharge to any adjacent metallic substance.

46. The Corporation shall not connect the wires and fittings on a consumer's premises with its mains, or, in the case of premises already connected, continue the supply from its mains, unless it is reasonably satisfied that the requirements of this license are complied with, that the wiring and fittings are suitable for the voltage at which supply is being given, that the installation generally is in accordance with the requirements of good practice, and that the connection or continuance of supply would not cause a leakage from those wires and fittings exceeding one ten-thousandth part of the maximum supply-current to the premises.

For the purpose of satisfying itself that the requirements of this license are being observed, the Corporation may require that notice be served upon it of the intention to instal wires, fittings, lamps, motors, or other apparatus on any premises, and may inspect the same during any reasonable hours while the installation of such is in progress.

47. If the Corporation is reasonably satisfied, after making all proper examination by testing or otherwise, that the wiring and fittings are not suitable for the voltage being employed, that a leakage exists at some part of a circuit of such extent as to be a source of danger, and that such leakage does not exist at any part of the circuit belonging to the Corporation, or that any other requirements of this license are not complied with, then and in such case any officer of the Corporation duly authorized by it in writing, or, if the Corporation so requires, on application by it to the Minister of Telegraphs, any officer of the Post and Telegraph Department (hereinafter referred to as "an Electric Inspector") instructed to so act, may, for the purpose of discovering whether the leakage exists at any part of a circuit within or upon any consumer's premises, or whether the wiring is suitable and the general requirements of the license are complied with, by notice require the consumer, at some reasonable time after the service of the notice, to permit him to inspect and to test the wires and fittings belonging to the consumer and forming part of the circuit.

In any case where the Corporation requires the services of an Electric Inspector under this section it shall pay the cost of such services.

If on such testing and inspection the officer or Electric Inspector discovers a leakage from the consumer's wires exceeding one ten-thousandth part of the maximum supply-current to the premises, or that the requirements of this license are not properly conformed to, or if the consumer does not give all due facilities for inspection and testing, the Corporation shall either not commence the supply or shall forthwith discontinue the supply of energy to the premises in question, giving immediate notice to the consumer of its reasons for not commencing or for discontinuing the supply, and in either case supply shall not be given until it is reasonably satisfied that the installation is in conformity with the requirements of this license.

48. If any consumer is dissatisfied with the action of the Corporation in refusing to give, or in discontinuing, or in not recommencing the supply of energy to his premises, the wires and fittings of that consumer may, on his application to the Minister of Telegraphs, and on payment of the cost, be inspected and be tested for the existence of leakage by an Electric Inspector.

This provision shall be indorsed on every notice given under the provisions of either of the two last preceding sections.

49. From and after the time when the Corporation commences to supply energy it shall maintain continuously sufficient power for the use of all the consumers for the time being entitled to be supplied; provided that, for any purposes connected with the efficient working of the undertaking, the Minister of Telegraphs may give permission to the Corporation to discontinue the supply at such intervals of time and for such periods as he may think expedient. When the supply is so discontinued, public notice shall be given, when practicable, of such discontinuance, and of the probable duration thereof.

50. The Minister of Telegraphs may at any time order an inspection to be made of the works, lines, and wires

of the Corporation used for electric-lighting and power purposes. When a defect or defects are found to exist they must be remedied forthwith, and should they be serious in the opinion of the officer or person inspecting, the Minister of Telegraphs may, on receipt of the report, direct the Corporation to at once cease transmitting energy either over the whole of the Corporation's lines and wires, or over any part thereof, as to him may seem fit, until such defect or defects are repaired or remedied. The cost of such inspection shall be borne by the Corporation.

51. After the supply of energy has begun, particulars shall be given to the local Postmaster of each further proposed extension or alterations of lines or wires.

52. If the Corporation makes default in complying with any of the provisions of this license it shall be liable to a penalty not exceeding £20 for every such default; but it shall not be held to have committed default for any failure to maintain power continuously if such failure be due to the breakdown of machinery or other accident, unless such breakdown or accident shall be proved to be due to negligence on the part of the Corporation.

The recovery of a penalty under this license shall not affect the liability, if any, of the Corporation to make compensation in respect of any damage or injury which may be caused by reason of the default.

As witness my hand, this first day of June, one thousand nine hundred and eleven.

THOS. MACKENZIE,
Acting Minister of Telegraphs.

LOCALITY AND DESCRIPTION.

The distance of this block from Opuā, the nearest seaport, is about eleven miles. The Whangarei-Opuā Railway line runs through the block, and as a daily time-table is maintained settlers will thus find a quick means of transit for shipping goods to a market *via* either Opuā or Whangarei. From the former port there is a bi-weekly steamer service, and from the latter a daily service. The country on the Kawakawa-Towai Road is poor pipeclay. Along the railway-line the majority of the land is kahikatea swamp. The soil is very good; and when properly drained will make excellent country. The sections containing bush are all well adapted for dairying, and the higher country is excellent sheep-country, the soil resting mostly on a limestone formation. All the sections are very well watered.

Access to the block from Auckland is by steamer to Whangarei or Opuā, and thence by train to Motatau Railway-station.

Time for removal of timber: Three (3) years. Any timber which has been felled and not removed at the end of the term, owing to there being no fresh, or for any other valid reason, may be removed at any time within six months from such date; provided that the consent of the Tokerau District Maori Land Board is obtained, it being satisfied that the non-removal of the timber is not due to any negligence or fault on the part of the purchaser.

4. Any tenderer who submits an offer for a group of sections is required to state the length of time he desires for the removal of the timber in excess of the three years aforementioned. The Board may, if it thinks fit, grant an extension of time; but in any case such tenderer will be required to remove the timber from one section only at a time, so that when the timber is removed the section may revert to the Board, subject to tramway rights (if any), before the removal of timber on another section is commenced.

5. The quantities stated are standing measurements, and only those trees bearing the special distinguishing brand set out in the Schedule in connection with each section are included in this sale.

6. The aforementioned quantities, qualities, and kind as to the said timber shall be taken as sufficiently accurate for the purpose of this sale; and no contract for purchase shall be voidable, nor shall the successful tenderer be entitled to any abatement in price, by reason of the said timber being of less quantity, quality, and kind than as stated herein or in any advertisement having reference to the said timber, nor shall any extra sum be claimed by the Tokerau District Maori Land Board if for any reason the quantity of timber is found to be in excess of that stated herein.

7. The licensee shall make and deliver, on a date to be fixed by the President, a statement of the number and contents of trees felled during the preceding period, together with total quantity of timber felled as from the commencement of the term of his timber-cutting license, and such statement shall be accompanied by a statutory declaration as to the correctness thereof.

8. The quantities stated are part measurement and part estimated measurement.

9. Should any dispute arise as to the boundaries the decision of the President of the said Maori Land Board shall be final.

10. If at any time during the currency of the license any person duly authorized by the President of the Tokerau District Maori Land Board shall report, or it otherwise appears, that the timber on the said area is being improperly cut, or for any other reason, the said President may, by notice in writing to the licensee, suspend his license pending investigation, and the President may cancel such license if it is found that the conditions herein have been infringed, without prejudice to any proceeding for damage done, recovery of amounts due on promissory notes, or otherwise.

11. It shall be unlawful for the licensee to transfer, assign, or in any way dispose of his license, or of the timber, or of his interest therein, to any other person until after the expiration of two years from the date at which the tender was accepted: Provided, however, that where the licensee proposes to sell the timber with his mill, plant, and appliances in their entirety, he may do so with the written approval of the President first obtained; and in such case the license may be transferred accordingly on payment of a fee of £1 1s. to the said Maori Land Board. Such approval may be given or refused in the discretion of the Board.

12. No bleeding of kauri-trees included in this sale will be permitted without the express written consent of the said Maori Land Board.

13. The successful tenderers will be required to avoid doing any damage to the cultivations, kainga, and fencing of the Native owners at present occupying the several sections, and if in removing any timber it is found absolutely necessary to do so, the purchaser will repair such damage, or, in lieu thereof, pay such compensation as shall be determined adequate. Any such compensation to be determined in terms of the Arbitration Act, 1908.

14. A license will be issued in due course, subject to the foregoing conditions.

15. In the event of the lots not being disposed of, applications may be received and dealt with at any time within three months from the above date of closing tenders (unless previously formally withdrawn), providing, however, that the amount is not less than the upset prices stated herein.

16. Tenders must be submitted on forms which will be supplied on application, and envelopes enclosing the same must be marked "Tender for Timber," and addressed to the President of the Tokerau District Maori Land Board, Auckland, New Zealand.

17. The highest or any tender not necessarily accepted.

18. All puriri timber on the land is reserved from sale.

TERMS.

The timber will be offered in separate lots, and tenders must be accompanied by a deposit of 5 per cent. on the amount of tender, in cash, marked cheque, or post-office order; the balance to be paid, if tender accepted, as under :—

1. Payment for timber shall be made by the successful tenderer either wholly in cash on acceptance of tender, or partly in cash and partly in instalments as follows: One-third in cash within fourteen days after date of notice of acceptance of tender (the deposit of the successful tenderer will be retained as part-payment of this), together with £1 1s. license fee, and one-third within one year, and the balance within two years from date of acceptance of tender.

2. All such instalments shall bear interest at the rate of 5 per cent. per annum as from the date of acceptance of tender, and, with the interest, shall be secured by promissory notes payable on demand, and made and indorsed by two or more indorsers, as required by, and to the satisfaction of, the President of the Tokerau District Maori Land Board.

3. In case where payment is to be made by instalments, the following special provisions shall apply :—

(1.) The property in all timber, whether standing, felled, or in logs, shall remain the property of the Tokerau District Maori Land Board until all the instalments are paid.

(2.) The value of the timber cut shall at no time exceed the total amount actually paid.

(3.) In any case where the President is satisfied that timber has been cut in excess of limit fixed by the last preceding paragraph, he shall appraise the quantity and value of timber so cut in excess, and demand payment from the licensee of the amount of such appraisal. The amount paid shall be in or toward satisfaction of the accruing instalments in the order in which they accrue due, and shall accordingly be credited to the same, as also the promissory notes securing the same. In default of payment of such amount for the space of fourteen days, the whole of the unpaid instalments shall be payable forthwith, and payment may be enforced accordingly.

Deposits of unsuccessful tenderers will be returned.

Full particulars may be obtained at the office of the Under-Secretary for Native Affairs, Wellington, and at the office of the Tokerau District Maori Land Board, Auckland.

WALTER DINNIE,
President, Tokerau District Maori Land Board.
