* These remaining suburbs do not lie within borough boundaries, and particulars respecting them have not been obtained for the Vital Statistics. Closely correct annual statements of population outside boroughs are not obtainable.

In the above table are given the deaths and death-rates for each of the four cities, for the suburban boroughs severally, and for each city with its suburban towns.

Deaths occurring at hospitals, of persons not residents of the borough wherein the hospital is situated, have been allotted in each case to the borough where the disease was contracted, and not to that in which the death actually took place.

The inclusion of the suburban boroughs tends to lower the rate at each of the four centres,

	Death-rates per 1,000 of Population.	
Auckland City	0.80	
and eight suburban boroughs		0.76
Wellington City	0.71	
and four suburban boroughs		0.68
Christchurch City	0.72	
and four suburban boroughs		0.71
Dunedin City	0.71	
and six suburban boroughs		0.66

Including the suburbs, the rate at Auckland is the highest, and at Dunedin the lowest.

Compared with March, 1911, the results are,—

	1911.	1912
Auckland and suburbs	0.99	0.76
Wellington and suburbs	0.86	0.68
Christchurch and suburbs	0.72	0.71
Dunedin and suburbs	1.01	0.66

The total births in the four chief cities and their suburban boroughs amounted to 640, against 582 in February—an increase of 58. The deaths in March were 200—an increase of 36 as compared with last month. Of the total deaths, males contributed 110, females 90. Forty-two of the deaths were of children under five years of age, being 21 per cent. of the whole number; 35 of these were under one year of age.

There were 57 deaths of persons of 65 years and upwards in the four chief cities and their suburban boroughs, as against 61 in February. The following table shows the classification:—
