ORDER IN COUNCIL.

At the Government House, at Wellington, this nineteenth day of August, 1912.

Present:

HIS EXCELLENCY THE GOVERNOR IN COUNCIL.

WHEREAS by section two of the Public Works Amendment Act, 1911, it is provided that no person shall lay, construct, put up, place, or use any electric line except under the authority of a license issued by the Governor in Council under that Act: And whereas the Opotiki Borough Council (hereinafter referred to as "the Council") desires to erect electric lines within the Borough of Opotiki, and it is expedient accordingly to issue a license in respect thereof under the said section:

SCHEDULE.

CONDITIONS.

1. In the following conditions—

"Consumer's wires" means any electric line on a consumer's premises which is connected to the service lines of the Council.

"Pressure" means the difference of electrical potential between any two conductors through which a supply of energy is given, or between any part of either conductor and the earth.

"Inspecting Engineer" means the Engineer or other officer appointed by the Minister for the purpose of inspecting the works to be constructed or maintained by the Council.

"Minister" means the Minister of Public Works.

"Telephone" includes telephone.

Any metallic body to be "efficiently connected with earth" shall be connected with the general mass of the earth in such manner as will ensure at all times an immediate and safe discharge of electrical energy.

2. The supply of electrical energy shall be given to private consumers by means of direct current on the two- or three-wire system at a pressure of 230 volts effective between each of the outer wires and the neutral and 460 volts between the two outer wires. The declared voltage at the consumer's terminals shall be 230 and 460 volts respectively.

3. The neutral wire shall be efficiently insulated throughout its length, and shall be earthed only at the power-station. The earth connection shall be provided with a switch for cutting off the earth connection for testing, and with a recording ammeter reading to a maximum of 5 amperes.

4. The main switchboard shall be made of and be mounted on material that is not inflammable.

5. Except where otherwise provided, the overhead conductors may be bare. If at any time it is found detrimental to the public safety to have these wires bare, the Minister may require the Council to have them insulated, and they shall thereupon be insulated accordingly. No electric-light wire shall come within 3 ft. of any other class of aerial wires or of cables, except where it may be permitted to pass the electric-light wires through such other wires or cables at a pole.

6. Where lead-covered telephone cables or any open telegraph or other aerial wires are crossed above or beneath by the electric-light wires, the latter wires shall be insulated with not less than 600-megohms-per-mile grade of vulcanized rubber throughout the crossing-span, and over every such span they shall be suitably suspended from effectively earthed steel bearer-wires if the Minister of Telegraphs shall so require.

7. In places where it may be required to cross with the electric-light wires through any other aerial wires or through cables, all such through crossings, if permitted, shall be effected at a pole. In every case of a through crossing, no matter whose property the lines crossed through may be, the method of carrying the electric-light wires across the pole, protecting them thereon, preventing other wires from coming into contact with them, and

protecting persons working on the poles from danger of shock, shall be to the satisfaction of the Minister of Telegraphs. Where the insulated wires cross through on the pole they shall be encased in a protecting tube for the entire length of the arms on such pole. If metal pipe is used to encase the wires it shall be effectively earthed.

8. Efficient guard-wires shall, if so required by the Minister of Telegraphs, be erected in a manner to meet with his approval at all crossings and places where the electric-light wires intersect telegraph or other wires. The Council shall bear the expense of such guard-wires in all cases where an electric-light wire intersects a telegraph or other wire previously existing.

9. In running the lines authorized by this license through streets where no telegraph lines exist, the Council shall keep to one side of the street, and in running service wires to the opposite side of the street the Council shall arrange so as to interfere as little as possible with the route of any future telegraph line.

10. Except by permission of the Minister, all overhead electric-light pole lines shall be placed on the opposite side of the streets to that on which any telegraph-pole lines exist; and where the erection of the electric-light wires necessitates the alteration of any existing telegraph wires, and such alteration is approved by the Minister of Telegraphs, the expense of the alteration shall be borne by the Council.

11. Where the electric-light wires are on one side of a street and the telegraph wires are on the other, and service is required to be given from either to the other side of the street, the Council and the Minister of Telegraphs shall give to each other reasonable facilities as far as possible to effect supply.

12. Every main shall be tested for insulation after having been placed in position and before it is used for the purposes of supply, the testing pressure being at least 500 volts, and the Council shall duly record the results of the tests of each main or section of a main, and forthwith forward a report thereof to the Resident Engineer at Tauranga.

13. The insulation of every complete aerial and underground circuit used for the supply of energy, including all machinery, apparatus, and devices forming part of or in connection with such circuit, shall be so maintained that the leakage current shall not under any conditions exceed one-thousandth part of the maximum supply current. Every leakage shall be remedied without delay. Every such circuit shall be tested for insulation at least once in every week, and the Council shall duly record the results of the tests, and forward a report thereof at the end of each week to the Resident Engineer at Tauranga.

14. The sectional area of the conductor in any electric line (other than service wires or connections to street lamps) laid or erected in any street shall not be less than 7/18 standard wire gauge service wires, and connections to street lamps shall not be less than No. 12 standard wire gauge if solid or 7/20 standard wire gauge if stranded.

15. All metal pipes or coverings containing any electric wire shall be efficiently connected with earth, and shall be so jointed as to make good electrical connection throughout their whole length.

16. Arc lamps used in any street for public lighting shall be so fixed as not to be in any part at a less height than 10 ft. from the ground.

All arc lamps shall be so guarded as to prevent pieces of ignited carbon or broken glass falling from them, and shall not be used in situations where there is any danger of the presence of explosive dust or gas.

17. The variation of pressure at any consumer's terminals shall not exceed 4 per cent. above or below the normal pressure at which he is being supplied.

18. Every support for an aerial line shall be of durable material and properly strengthened against forces due to wind-pressure, change of direction of line, and unequal length of span. The factor of safety of such supports if of iron, steel, or ferro-concrete shall be at least four, and if of wood shall be at least six, taking into consideration all possible stresses, including wind-pressure at 30 lb. per square foot on plane surfaces and 18 lb. per square foot of diametrical plane for cylindrical surfaces. The stress in the aerial conductors shall not exceed 28,000 lb. per square inch for copper and 15,000 lb. per square inch for aluminium in the extreme case of a temperature of 12° Fahr. and a wind-pressure of 18 lb. per square foot of diametrical plane occurring simultaneously.

19. Earth-wires, where led down poles, shall be protected by casing for a distance of 8 ft. from the ground.

20. All aerial wires shall be attached to suitable insulators carried on cross-arms of suitable material and cross-section, and they shall be so attached to the insulators or guarded that they cannot fall away from the support. Conductors covered with insulating material shall be so attached that their insulation will not be impaired where they are secured to the insulator.

21. Any aerial wire shall not in any part thereof be at a less height from the ground than 18 ft., or within 5 ft. measured horizontally or vertically from any part of any building or erection other than a support for the line, except where brought into a building for the purpose of supply. No work of any nature shall be erected or constructed upon, over, or under any part of the Government railways until the Council has obtained the consent of the Minister of Railways thereto, as required by section 4 of the Government Railways Amendment Act, 1910 (No. 2).

22. Service lines from aerial lines shall be led as directly as possible to insulators firmly attached to some portion of the consumer's premises which is not accessible to any person without the use of a ladder or other special appliance. Every portion of any service line which is outside a building, and is within 7 ft. from any part of the building, shall be rubber-insulated.

23. Where an aerial line crosses a street, the angle between the line and the direction of the street at the place of crossing shall not be less than 60 degrees, and the spans shall be as short as possible. The minimum height of the line shall be 20 ft. above the street level.

24. Where an aerial line crosses or is in proximity to any metallic substance, precautions shall be taken against the possibility of the line coming into contact with the metallic substance, or of the metallic substance coming into contact with the line by breakage or otherwise.

25. Every aerial line, including its supports, its conductors, and their insulating covering, and all the structural parts and electrical appliances and devices belonging to or connected with the line, shall be duly and efficiently maintained as regards both electrical and mechanical conditions.

26. An aerial line shall not be permitted to remain erected after it has ceased to be used for the supply of energy, unless the Council intends within a reasonable time again to take it into use.

27. Where any portion of any electric line or any support for an electric line is exposed in such a position as to be liable to cause injury from lightning, it shall be efficiently protected against such liability.

28. The Council shall be responsible for all electric lines or wires, fittings, and apparatus belonging to it, or under its control, which may be upon a consumer's premises, being maintained in a safe condition and in all respects fit for supplying energy.

29. In delivering the energy to a consumer's terminals the Council shall exercise all due precautions so as to avoid risk of causing fire on the premises.

30. A suitable safety-fuse or other automatic circuit-breaker shall be inserted in each service line within a consumer's premises as close as possible to the point of entry, and contained within a suitable locked or sealed receptacle of fireproof construction.

31. All electric wires placed on a consumer's premises shall be insulated with rubber of 600-megohm grade, and shall be thoroughly protected against injury to the insulation or access of moisture. All electric wires shall be so fixed and protected as to prevent the possibility of electrical discharge to any adjacent metallic substance.

32. The Council shall not connect the wires and fittings on a consumer's premises with its mains, or, in the case of premises already connected, continue the supply from its mains, unless it is reasonably satisfied that the requirements of this license are complied with, that the wirings and fittings are suitable for the voltage at which supply is being given, that the installation generally is in accordance with the requirements of good practice, and that the connection or continuance of supply would not cause a leakage from those wires and fittings exceeding one ten-thousandth part of the maximum supply current to the premises.

For the purpose of satisfying itself that the requirements of this license are being observed in so far as they apply to wires on a consumer's premises, the Council may require that notice be served upon it of the intention to instal wires, fittings, lamps, motors, or other apparatus on any premises, and may inspect the same during any reasonable hours while the installation of such is in progress.

33. If the Council is reasonably satisfied, after making all proper examination by testing or otherwise, that the wiring and fittings are not suitable for the voltage being employed, that a leakage exists at some part of a circuit of such extent as to be a source of danger, and that such leakage does not exist at any part of the circuit belonging to the Council, or that any other requirements of this license are not being complied with, then and in such case any officer of the Council, duly authorized by it in writing, may, for the purpose of discovering whether the leakage exists at any part of a circuit within or upon any consumer's premises, or whether the wiring is suitable and the general requirements of the license are complied with, by notice require the consumer, at some reasonable time after the service of the notice, to permit

him to inspect and to test the wires and fittings belonging to the consumer and forming part of the circuit.

If on such testing and inspection the officer discovers a leakage from the consumer's wires exceeding one thousandth part of the maximum supply current to the premises, or that the requirements of this license are not properly conformed to, or if the consumer does not give all due facilities for inspection and testing, the Council shall either not commence the supply or shall forthwith discontinue the supply of energy to the premises in question, giving immediate notice to the consumer of its reasons for not commencing or for discontinuing the supply, and in either case supply shall not be given until the Council is reasonably satisfied that the installation is in conformity with the requirements of this license.

34. If any consumer is dissatisfied with the action of the Council in refusing to give, or in discontinuing, or in not recommending the supply of energy to his premises, the wires and fittings of that consumer may, on his application to the Minister, and on payment of the cost, be inspected and tested by the Inspecting Engineer.

This provision shall be indorsed on every notice given under the provisions of either of the two last preceding clauses.

35. From and after the time when the Council commences to supply energy in pursuance of this license, it shall maintain continuously sufficient power for the use of all the consumers for the time being entitled to be supplied: Provided that, for any purposes connected with the efficient working of the undertaking, the Minister may give permission to the Council to discontinue the supply at such intervals of time and for such periods as he may think expedient. When the supply is so discontinued, public notice shall be given, when practicable, of such discontinuance, and of the probable duration thereof.

36. The construction of the works hereby authorized shall be substantially commenced on or before the 1st day of November, 1912, and shall be completed on or before the 1st day of November, 1914.

37. The Council shall, prior to the completion of the said works, give to the Minister at least one month's notice in writing of the estimated date of such completion.

38. The Council shall not use the electric lines authorized by this license, or permit the same to be used for any purpose, until the Minister has given notice in writing to the Council that he has received from the Inspecting Engineer a certificate that the works have been satisfactorily carried out.

39. The Minister may at any time order an inspection to be made of the works, lines, and wires used by the said Council for electric lighting and power purposes. If any defect is found to exist it must be remedied forthwith, and if, in the opinion of the Inspecting Engineer, such defect is serious, the Minister may, on receipt of his report, direct the Council to at once cease transmitting energy either over the whole of its lines and wires or over any specified part thereof, until such defect is repaired or remedied. The cost of such inspections shall be borne by the Council.

40. After the supply of energy has been begun, not less than fourteen days' notice in writing shall be given to the Resident Engineer of Public Works at Tauranga, or such other officer as the Minister from time to time directs, of each further extension that the Council is about to make.

41. If the Council makes default in complying with any of the provisions of this license it shall be liable to a penalty not exceeding £20 for every such default, to be recoverable by any person authorized by the Minister in that behalf as a debt due to the Crown; but the Council shall not be held to have committed default for any failure to maintain power during the hours that it shall have determined to supply energy if such failure is due to the breakdown of machinery or other accident, unless such breakdown or accident is proved to be due to negligence on the part of the said Council.

42. The recovery of a penalty under this license shall not affect the liability, if any, of the Council to make compensation in respect of any damage or injury which may be caused by reason of the default.

43. This license, and the benefits and obligations hereunder, shall not be assigned by the Council without the express consent in writing of the Minister first had and obtained; but such consent shall not be withheld if it is proved to the satisfaction of the Minister that the transferee is financially and otherwise able to carry out the obligations specified in this license.

44. Notwithstanding anything in the last preceding clause of these conditions, if the Council fails to comply with the terms of any such notice for ninety days after the receipt thereof the Governor in Council may thereupon revoke this license without further notice.

45. For the purpose of ascertaining whether the conditions of this license are being faithfully complied with

by the Council, the Minister, or any person appointed by him in that behalf, may at all reasonable times enter on the lands and works and inspect the same.

46. Nothing in this license shall be deemed in any way to interfere with, affect, or abridge any rights or powers vested in His Majesty the King, or in the Governor on his behalf, authorizing the construction, management, or working of any public works, nor shall any compensation be payable to or on behalf of the Council for injury done to the works herein authorized by the construction, management, or working of any such public work as aforesaid, or for the loss occasioned thereby, or for the exercise of any such right or power as aforesaid.

Moreton Bay.—New Bar Cutting, Brisbane River.

NOTICE is hereby given that, on and after 1st October, 1912, the dredged cutting giving entrance to the Brisbane River hitherto will be abandoned, and the new cutting will be open to use. This new cutting is on the same alignment as the cutting from the west beacon inwards past Luggage Point. Its bearing is S. 23 degrees W. magnetic.

The new cutting has a bottom width of 400 ft. and a net depth of 24 ft. at low-water springs.

It will be marked by five red triangular beacons to starboard and five square black beacons to port when entering; the outermost beacons are on a depth of 9 ft. at low water, and all beacons are 150 ft. off the edge of the cutting. The marks to indicate the centre-line will be two lighthouses on Bulwer Island, transferred from Fisherman Islands. By night a white light will be shown from the back tower and a red light from the front or nearer tower, these lights being the same as those marking the present entrance cutting. In addition, the small floating white light now marking the outer end of the present cutting will be transferred to mark the outer end of the new cutting, and will be moored on the west side thereof in a depth of 24 ft. at low water, distant 450 ft. from the line of lights. It will bear N. 72 degrees E., distant 1½ miles from the pile lighthouse.

The main light and the tidal signals shown from the pile lighthouse will be continued as hitherto until the new pile lighthouse is erected, of which due notice will be given.

The small white light shown from the west beacon will be discontinued.

Directions.

By Day.—Vessels from seaward will steer for the pile lighthouse as hitherto until the floating lightboat is plainly visible, when a course is to be steered to pass 450 ft. to eastward of it, bringing the two lighthouses on Bulwer Island bearing S. 23 degrees W. in line ahead. Keep them so passing six red beacons to starboard, including the present west beacon, and five black beacons to port, after which continue on the same line until past Luggage Point and the floating lightboat is neared, when proceed as before.

By Night.—Vessels from seaward will steer for the pile light as hitherto until the small floating white light at the outer end of the cutting is visible, when steer to pass it on the starboard hand 450 ft. distant, and bring the red and white lights on Bulwer Island bearing S. 23 degrees W. in line ahead. Keep them so passing Luggage Point until the small floating light marking the turn into the Pelican Bank cutting is approached, when proceed as before.

The new pile light will bear N. 62½ degrees E., distant 13,800 ft. from the existing pile light, and will be 450 ft. to the eastward of the line of marks for the new cutting, in a depth of 30 ft. at L.W.S.
