* These remaining suburbs do not lie within borough boundaries, and particulars respecting them have not been obtained for the Vital Statistics. Closely correct annual statements of population outside boroughs are not obtainable.

In the above table are given the deaths and death-rates for each of the four cities, for the suburban boroughs severally, and for each city with its suburban towns.

Deaths occurring at hospitals, of persons not residents of the borough wherein the hospital is situated, have been allotted in each case to the borough where the disease was contracted, and not to that in which the death actually took place.

The inclusion of the suburban boroughs tends to lower the rate at Auckland, Wellington, and Dunedin.

		Death-rates per 1,000 of Population.	
Auckland City	1.00	0.73
and eight suburban boroughs
Wellington City	1.16	1.08
and four suburban boroughs
Christchurch City	1.14	1.14
and four suburban boroughs
Dunedin City	0.99	0.90
and six suburban boroughs

Including the suburbs, the rate at Christchurch is the highest, and at Auckland the lowest.

Compared with July, 1911, the results are,—

		1911.	1912.
Auckland and suburbs	1.08	0.73
Wellington and suburbs	0.99	1.08
Christchurch and suburbs	1.06	1.
Dunedin and suburbs	1.07	0.90

The total births in the four chief cities and their suburban boroughs amounted to 682, against 677 in June an increase of 5. The deaths in July were 268—an increase of 16 as compared with last month. Of the total deaths, males contributed 151, females 117. Thirty-six of the deaths were of children under five years of age, being 13.43 per cent. of the whole number; 28 of these were under one year of age.

There were 99 deaths of persons of 65 years and upwards in the four chief cities and their suburban boroughs, as against 107 in June. The following table shows the classification:—
