SCHOOL FOR THE DEAF, NEAR SUMNER, CHRISTCHURCH.

UNDER THE CONTROL AND SUPERVISION OF THE EDUCATION DEPARTMENT.

Director: Mr. J. E. STEVENS.

FOR Deaf Children of sound intellect. The pupils are taught to understand and use ordinary speech. The full charge for board and education is £40 a year, but less is accepted from parents who cannot afford to pay this amount. In case of necessity admission is free.

By the Education Act it is compulsory for deaf children to come under instruction at the age of six, and to continue until the age of twenty-one unless the Education Department previously grants exemption. Though a child is, as a rule, best fitted to begin the school course at the age of six, advice should be obtained as soon as any sign of deafness is observed.

The following classes of deaf children are admitted to the School for the Deaf (sound intellect being always a necessity):—

1. Children born deaf, or who have lost their hearing before learning to speak.
2. Children who can hear a little, but are too deaf to be taught in a public school.
3. Children who have lost their hearing after having learned to speak.

The Act imposes upon every parent, teacher of a school (either public or private), constable, or officer of a charitable or kindred institution who is aware of the place of residence (either temporary or permanent) of a deaf child, and the householder in whose house any such child resides, an obligation to send notification of the fact to the Minister of Education, giving the name, age, and address of the child; and any neglect or failure to comply with this provision involves liability to a fine.

Information and advice may be obtained from the Director, or from the

SECRETARY TO THE

REVIEW OF NEUROLOGY.

APRIL-JUNE. VOL. XVII.

MILITARY PHYSICAL ORTHOPÆDICS. PART I. GUNSHOT WOUND OF NERVE. ARTHUR STANLEY HERBERT, M.D., B.S., Lieut.-Col., N.Z.M.C. Pp. 136, with 62 figures. Price, 6s.; postage, 6d. extra.

This volume deals exclusively with the consideration of the later results of gunshot wound of nerve trunks and their treatment. It is practically a record of personal experience, as the work was done remote from other orthopædic hospitals. The grouping is in terms of convenience of treatment rather than of anatomy, and deals with the physical as distinguished from the surgical side of orthopædics. Emphasis is laid on the importance of promoting the voluntary action of partly paralysed muscles by the provision of artificial muscles, and thus rendering the results obtained by massage, electricity, baths, douches, &c., accessory rather than indispensable. It is claimed this method is simpler, less expensive, and more humane, as it removes the patient from the category of invalids to that of fairly useful workers. Great ingenuity has been exercised in devising the different mechanical supports of special splints and rubber muscles for the paralysed muscle, the use of rubber as an active elastic force being particularly utilized, and indeed is the basic idea underlying the whole system of treatment here advocated. The book is copiously illustrated by good figures, which add considerably to its value; the apparatus itself is characterized by its simplicity, and has stood the test of actual use in a large number of cases.
