19. *Work to be done by Licensed Plumbers.*—(a.) No person other than a duly licensed plumber shall instal any supply or connect any pipe with the waterworks, or make any alteration or addition or repairs to any pipe, tap, or other water-fitting.

(b.) Two days' notice in writing shall be given by the licensed plumber of the day and hour he proposes to make any such connection, alteration or addition, or repairs to the office of the Department's local controlling officer, and permission be obtained therefrom before any such connection, additions, alterations, or repairs are put in hand.

(c.) Licensed plumbers shall be responsible to the Department for all injury done by them or their works to the mains or streets or to any property of the Department.

21. *Uninterrupted Supply not guaranteed.—Cisterns.*—The Department does not guarantee an uninterrupted supply of water nor a minimum pressure, and in particular no allowance or compensation will be made on account of the water being shut off for any cause. Consumers to whom a constant supply is of importance should therefore provide cisterns in case of such emergency.

22. *Cutting off Supplies on Emergency.*—In cases of emergency necessitating the reduction of the supply of water, the Department's local controlling officer, on giving such public or other notice as may be possible, may cut off as many services as he may deem necessary for such period as is required, and no allowance or compensation shall be made on account of water thus being cut off.

23. *Inspection.*—(a.) Any person acting under the authority of the Department may, between the hours of 8 o'clock in the forenoon and 6 o'clock in the afternoon of any day except Sunday, enter into any land or building supplied with water from the waterworks to see if such water is being wasted or misused.

(b.) If such person is refused admittance or obstructed in such examination, the Department may stop the supply of water in any manner it thinks fit.

24. *Notice of Removal of Pipe to be given.*—(a.) Any person may remove any pipe or other apparatus belonging to him connected with the waterworks, after giving to the Department fourteen days' notice in writing of such his intention, and of the time of such removal. Such work must be done by a licensed plumber, but the owner shall be liable for all damage done to any part of the waterworks thereby.

(b.) Disconnection of such pipes from and at the main shall be done by the Department only.

(c.) If any person removes any such pipe or apparatus without giving such notice, he shall be liable to a penalty of not more than £20, and to pay for all damage done to the waterworks by such removal.

25. *Penalties for Offences against Waterworks.*—If any person—

(a.) Wilfully or negligently allows any pipe or apparatus on his premises to be out of repair so that water is wasted, or alters any meter, or does or suffers any act whereby his supply of water is improperly increased;

(b.) Not having agreed to be supplied with water from the waterworks, takes any such water from the supply furnished to another person;

(c.) Being supplied with water from the waterworks, supplies another person who has not agreed to be so supplied with, or permits him to take, any such water;

(d.) Connects any pipe with a pipe of the waterworks, except in the presence of, or contrary to the direction of, the officer appointed by the Department to superintend the same, unless such officer fails to attend at the time named in the notice given as above mentioned (see by-law 19);

he shall be liable to a penalty of not more than £20 for each such offence, and to a further sum equal to the cost incurred by the Department in repairing the injury done to any part of the waterworks by any such act.

26. *Agreement to pay Water Charges.*—(a.) Every sum of money expressed in these by-laws to be payable for ordinary and extraordinary supplies shall be recoverable by the Department in any Court of competent jurisdiction as a debt.

(b.) Every person who, after the coming into operation of these by-laws, shall be supplied with water from the waterworks (whether such supply was originally granted before such coming into operation or shall thereafter be granted, and whether originally granted to such person or to some previous owner or occupier of the premises) shall sign an agreement in the form subjoined to these by-laws.

(c.) No new service (ordinary or extraordinary) shall be laid on until such agreement has been signed by the applicant for the same.

(d.) Where any ordinary or extraordinary service shall be actually laid on (whether it was laid on before or shall have been laid on since the commencement of these by-laws) and no such agreement shall have been signed in respect thereof, the person supplied shall sign an agreement within three such days after being required so to do by the Department's local controlling officer, and in default thereof the service may be cut off.

Notice to Mariners No. 60 of 1923.

Marine Department,
Wellington, N.Z., 2nd October, 1923.

NOTICE is hereby given that the New Zealand Marine Department will in a few weeks time be publishing a considerably enlarged edition of "Tables for Azimuths, Great Circle Sailing, and Reduction to the Meridian." The work will comprise two volumes of about 450 pages in each, many of the tables and some of the explanatory matter and examples being common to both volumes.

VOL. I (LAT. 60° N. TO 60° S.; DECLINATION 0° TO 89½°)

comprises 78 tables, almost all of which have been newly computed or recomputed. Tables, A, B, C, and D for azimuths, and great-circle-sailing problems have been very considerably expanded, and adapted for use in many other problems.

Table B, besides being given for declinations from 0° to 89½° to facilitate great-circle-sailing and other problems, and to include every celestial object in the heavens, has also been computed and tabulated for the 57 bright stars which are most used for navigational purposes for azimuths, and position-finding, for their declination in 1925.

By a repetition of the A Table both tables (which are used together) face one another, and are tabulated for every minute of time.

A traverse table is given for every mile of distance to 400 miles, and for every 100 miles from 400 to 1,000 miles. The table is given throughout for half degrees of courses from 0° to 15°, and from 75½° to 89½°.

Three Ex-meridian tables, independent of one another, have been published, one of which is of very wide limits, being available for all latitudes, declinations, and altitudes up to 3 hours, or 45° from the meridian. It is tabulated for every minute of time up to the 3 hours, and for every ½ degree of altitude and declination from 60° to 89½°.

It gives a true latitude within the limits of the table. Some very useful small tables are given—

- (1.) For showing at a glance the bearings of the Sun at different meridian zenith distances, in low latitudes; and the best times for observing to obtain position of ship by double altitudes.
- (2.) Limits in sidereal time in different latitudes for obtaining latitude and position line by Ex-meridian and Star Reduction Tables.
- (3.) Showing at a glance suitable pairs of bright stars for position-finding in different latitudes, and throughout the 24 hours, with the star's hour-angles and bearings.

Reduction to the Meridian and Azimuth Tables, for 17 bright stars up to the 1hr. 15m. from lower meridian, and azimuths for 3 hours from lower meridian; supplementing the azimuths which are omitted from Davis' Star Azimuth Tables. The reductions and azimuths for star Polaris are given for the 24 hours for declination in 1925.

Bearing Amplitude at true rising and setting for celestial bodies for latitudes 0° to 74°, and declination not exceeding 30°.

Hour-angle of a celestial body at true rising and setting for latitudes 0° to 74°, and declination not exceeding 38°.

Full explanatory matter with many chartlet diagrams and figures are given, and several up-to-date examples to show the use of the tables, and the methods recommended for position-finding, &c.

Price, £1 1s.

VOL. II (LATITUDES 60° TO THE POLES).

comprises 43 tables, some of which are duplicated with Vol. I—viz., Tables B, D, Ex-meridian, Traverse, and the smaller tables of Altitude correction, &c.

Table A is given for every minute of time, and both A and C Tables for Azimuths are given for every ½ degree of latitudes from 60½° to 89½°.

The tables which cost most labour (comprising about 65,000 tabulated calculations) and which the author hopes will be greatly appreciated, are the calculated reductions and azimuths for declinations 0° to 23° 30' N. and S. for latitudes 60° to 74° for the summer months, and 60° to 66° in the winter months.

These tables are calculated up to 1½ hours to 2 hours from the meridian (generally up to 2 hours). For midsummer months reductions and azimuths are calculated up to 3 hours from lower meridian for latitudes 67° to 74°.

These declinations, of course, are available for several stars, planets, and generally for the Moon as well as the Sun.

The reductions and azimuths of five of the brightest circumpolar stars have been computed and tabulated for hour-angles up to 3 hours from lower meridian for latitudes 60° to 66° N.; and besides for star Polaris for latitudes 60° to

90° for the 24 hours in 10 min. or 4 min. intervals of time as necessary to minimise interpolation.

The Calculated Reduction and Azimuth Tables are especially helpful for quick and accurate position-finding by the Marcq St. Hilaire system.

These stars are like so many lighthouses, enabling the navigator with a minimum of labour to find the line of position he is on, which he can often combine with a wireless position-line, or a second astronomical line of position to accurately determine the position of his ship.

The author is pleased to think that Arctic and Antarctic explorers, navigators patrolling the North Sea, our brave North Sea trawlers off Iceland, traders to Archangel and Hudson Bay, will no longer have to do without the aid of the special tables for quick position-finding, which are so plentiful in latitudes below 60°.

It is anticipated that these tables will be found of great value to aeroplane navigators as well as to shipmasters for the quick way in which the great circle course is obtained, and the ready methods of position-finding.
