#### SCHEDULE.

Silybum (variegated or milk thistle).

#### Deer-skins.

THERE is no protection on deer in any part of New Zealand. The animals may be destroyed at any time, but it is, of course, necessary to have the consent of the owner or controlling authority to go on land.

Deer-skins are marketable, and, where private persons experience any difficulty in otherwise disposing of such skins, the Department of Internal Affairs will accept and pay for those skins coming up to requirements. Chamois-skins are accepted under the same conditions.

The price which will be paid for deer-skins accepted as first grade will be 1s. 7d. per lb. dry weight.

Where skins do not come up to first grade requirements they will, where considered by the Department's Inspector to be marketable, be accepted at a lower rate, or the skins may be entirely rejected. The Inspector's decision will be final, and it must be clearly understood that skins are submitted on this understanding, and that any skins absolutely rejected will be destroyed.

Persons desiring to submit skins should first communicate with the Under-Secretary, Department of Internal Affairs, P.O. Box 7, Government Buildings, Wellington, when statement forms and advice as to the destination to which skins are to be sent will be forwarded. Statements must be prepared in duplicate (two copies) and sent to the same destination and at the same time as the skins. Skins received at the depots, for which there are no statement forms, will not be examined or any payment made until such statements are received.

The Department will not be responsible for losses of skins. The possibility of loss of skins in transit can be minimized by tying bundles securely and putting the name on each skin, when green, with indelible pencil.

The Department's Inspector will visit receiving depots about the end of February, April, June, September, and December.

Any freight charges not paid by the person sending in skins will be deducted from the amount payable.

Skins taken from August to December (inclusive) are lighter and of poorer quality than those taken from January to July (inclusive). Those taken during March, April, and May are the best quality and greatest weight, and every effort should be made to secure skins during these months.

The continuance of deer-skin markets is entirely dependent upon the skins being submitted in the best possible condition and so trimmed that every portion of each skin is of full value to those using the leather made therefrom.

The Department reserves the right to vary the conditions or to discontinue acceptance of skins at any time.

The following directions as to skinning, curing, packing, &c., are supplied:—

1. Skins must be dried by hanging over a tightly stretched wire or a pole, with the flesh side out, and thereafter folded only along the crease made from neck to tail. They must not be stretched by pegging out flat. During drying, which should be done in the shade in warm weather, edges must be prevented from rolling or sticking back, and frequent attention in this respect is essential. Spring clothes-pegs should be used to keep skins straight and prevent wrinkling and edges rolling.

2. Bleaching is caused by leaving out skins in alternate rain and sunshine. Bleached skins will be rejected.

3. Skins that are badly wrinkled, knife-marked, dirty, damp, moth or weevil infested, stale, torn, rat-eaten, rock-bruised, or otherwise damaged, or with fat or flesh left on, or with

excessive bullet-holes, will be rejected. It is imperative that all skins be thoroughly dry before being bundled, as one damp skin will ruin many others. Any damp skins will be immediately destroyed on receipt at the depot. No fat or flesh should be on the skins. The Department's deer-destruction parties recover some thousands of skins annually, and the "First Grade" standard adopted in the grading of skins submitted by private commercial hunters is one which experience has shown to be readily attainable by men of average skill with reasonable care.

4. Deer must be so skinned and skins so trimmed that front shanks (leg-skins), all points, hind shanks lower than half-way down to hocks, and neck shanks higher than the throat-line, are not included. The neck-skins of heavy stags must be cut off not higher than half-way between the shoulder and the ears and in all cases the ends of neck-skins must be cut square. In trimming, any bullet-holes near edges must be cut through to avoid leaving any narrow portions between the holes and the edges. Skins not trimmed to requirements will be further trimmed before weighing and the cost of labour so involved deducted from the amount payable.

5. Bundles must be securely tied with light rope. Wire must not be used. Skins must be treated with powdered naphthalene on hair side, after being dried, to keep away moth, &c. The greatest care should be exercised to see that deer-skins are at no time dried or stored in sheds where old sheep- or deer-skins, or pieces thereof, are stored or lying about, as these may be infested with moth or weevil, or both, and are therefore sources of danger to the deer-skins. Skins must be kept flat, folded along the back-bone line as they come off the drying line, and bundles must contain as near as possible twenty skins each. Each bundle must show on the left-hand bottom corner of the address tag the name and address of the sender and the number of skins in the bundle.

6. Recent investigations in connection with tanned deer-skins have revealed the fact that one of the main points which detrimentally affect their value is that of damage to the "grain" surface (the outside) by rocks. As the maintenance of satisfactory markets can only be achieved by hunters doing all possible to eliminate all conditions that detract from the value of skins, it is imperative that rock-damage be obviated as much as possible. While it is realized that in some cases some such damage is unavoidable, much can be done during skinning to prevent further damage, and any seriously damaged skins must not be submitted.

NOTE.—With a view to further assisting persons desirous of shooting deer for commercial purposes, the Department of Internal Affairs will supply .303 Mark VII military ammunition at 10s. 6d. per hundred rounds, freight payable by the purchaser. The purchase-price must accompany all orders for this ammunition, which may be obtained from the Conservator of Fish and Game, Rotorua, or the Custodian, Government Buildings, Wellington, Christchurch, Blenheim, Nelson, Hokitika, Dunedin, or Invercargill.

NOTES ON THE WEATHER FOR JUNE, 1936.

General.—Owing especially to the absence of wind or severe southerly weather, June was a very mild month for winter. Frosts and the lack of rain caused the growth of pasture to be checked over much of the North Island, but elsewhere there was an unusual amount and the quality is better than usual at this time of year. Stock are generally in excellent condition, but hoggets still rather backward in many places. In some places spring flowers are already showing. Farm work is well advanced.

Rainfall.—Heavy rains in Hawke's Bay on the 16th, in Nelson on the 27th and 28th, and in parts of South Canterbury on the 15th and 29th, were responsible for those districts having more than the average rainfall. The remainder of the country, however, had a very dry month. Less than half the average was recorded at many places, and in some it was the driest June on record.

Temperatures.—In Taranaki temperatures were slightly above normal, but in the remainder of the North Island, owing to the prevalence of south-westerly winds, they were considerably below. In the Waikato and the Bay of Plenty the departures were generally in the neighbourhood of 3° F. The west coast of the South Island and South Canterbury, also, had rather low temperatures. In the interior, however, means were as much as 3° F. and more above normal. In the fine, still weather of the first week there were many hard frosts, especially in the Bay of Plenty and Waikato districts. The 12th to the 14th was another frosty spell. There is less snow than usual on the mountains.

Sunshine.—The duration of bright sunshine was above the average for June in most places, but Nelson, Hanmer Springs, and South Canterbury had less than the usual. Tauranga recorded 170.6 hours and Napier 167.8.

Storm Systems.—The month began with very high pressures ruling over the Dominion. Although storms developed over south-eastern Australia they gradually dissipated as they moved eastward, and were able to make little impression on the New Zealand anticyclone. Fine weather prevailed with little wind. These conditions continued for a week, but on the 8th pressure began to fall, and on the 9th two depressions followed each other closely over the Dominion. General, though for the most part light to moderate, rain was experienced. Another anticyclone and several more fine days followed.

On the 15th a series of depressions commenced to traverse the country, the most important being one of cyclonic form which passed on the 16th. General rains were experienced on the 15th and 16th, some large totals being recorded over much of the North Island. Rivers rose high, and some flooding was in the Bay of Plenty, Poverty Bay, Hawke's Bay, Wairarapa, and Manawatu districts. On the 18th strong south-westerly winds and cold temperatures set in, some snow falling on the ranges. Rather unsettled conditions still persisted for some days, but there was a gradual improvement and fine weather ruled from the 24th to the 26th.

On the 27th there began the passage of another set of complicated depressions, and, commencing in the western districts of the South Island, unsettled weather with general rain persisted from then onwards to the end of the month. During the 28th and the following night a cyclone crossed the central portion of the Dominion. Gale winds were associated with it and there was heavy precipitation in the central provinces and South Canterbury with snow on the mountains. Some flooding occurred at Nelson.

The storm systems of the month were of unusual type, and the situation was seldom simple while depressions were, passing. At this time of year one expects a rather regular eastward progression of alternate high- and low-pressure areas, but during June these conditions failed to materialize.
