Wheat, Oats, and Barley.—Estimated Yields.

Census and Statistics Department, Wellington, 9th February, 1938.

THE following estimated average yields per acre of wheat, oats, and barley for the season 1937-38 have been compiled from reports furnished by Stock Inspectors of the Department of Agriculture throughout the Dominion, and are now published for general information.

District.	Wheat. Bushels per Acre.	Oats. Bushels per Acre.	Barley. Bushels per Acre.
North Island	34	39	43
Nelson	30	34	35
Marlborough	43	43	44
Canterbury	32	40	38
Otago	28	39	33
Southland	34	48	39
Average (estimated) for the Dominion	32	42	39

The above estimates may be compared with last season's actual average yields, which were: Wheat, 32.32 bushels; oats, 47.15 bushels; and barley, 36.36 bushels.

In accordance with the above estimates, the total yield of wheat for the season 1937-38 should be approximately 5,730,000 bushels, as against an actual yield of 7,168,963 bushels for the season 1936-37.

The area from which oats were threshed for the five seasons ending with 1936-37 averaged 22 per cent. of the total area under that crop. Assuming that a similar proportion is threshed this year, the total yield of grain should be approximately 2,550,000 bushels, as against an actual yield of 3,525,430 bushels for the season 1936-37.

On a similar assumption in regard to barley, the total yield of grain should be approximately 830,000 bushels, as against an actual yield of 746,948 bushels for the season 1936-37.

In the above estimates of total yields allowance has been made for crops which, as a result of adverse weather conditions experienced early in the season, will not be threshed.

J. W. BUTCHER,
Government Statistician.
