Wheat, Oats, and Barley.—Estimated Yields

Census and Statistics Department,  
Wellington, 15th February, 1950.

THE following estimated average yields per acre of wheat, oats, and barley for the season 1949-50 have been compiled from reports furnished by officers of the Department of Agriculture throughout New Zealand, and are now published for general information:—

District.	Wheat. Bushels per Acre.	Oats. Bushels per Acre.	Barley. Bushels per Acre.
North Island .. ..	42	38	40
Marlborough .. ..	29	24	40
Nelson .. ..	32	32	40
Canterbury .. ..	36	39	40
Otago .. ..	41	48	40
Southland .. ..	50	62	31
Average (estimated) for New Zealand .. ..	38	45	40

The above estimates may be compared with last season's actual average yields, which were: Wheat, 40-61 bushels; oats, 47-49 bushels; and barley, 38-43 bushels.

In accordance with the above estimates, the total yield of wheat for the season 1949-50 should be approximately 4,700,000 bushels, as against an ascertained yield of 5,958,026 bushels for the season 1948-49.

The area from which oats were threshed for the five seasons ending with 1948-49 averaged 34 per cent. of the total area under that crop. Assuming that a similar proportion is threshed this year, the total yield of grain would be approximately 2,600,000 bushels, as against a yield of 3,718,597 bushels for the season 1948-49.

On a similar assumption in regard to barley, the total yield of grain would be approximately 2,400,000 bushels, as against 2,256,362 bushels for the season 1948-49.

G. E. WOOD, Government Statistician.
