Box 857), Hamilton; Head Office, Mulgrave Street (Private Bag), Wellington 1; Wellington Trade Centre, Cubacade (Private Bag), Wellington 1; 159 Hereford Street (Private Bag), Christchurch 1; Cargill House, Princes Street (P.O. Box 1104), Dunedin.

V. R. WARD, Government Printer.

The diagram illustrates a central point connected to several peripheral points, forming a network structure. This could represent a central node in a graph or a hub-and-spoke model.

Network Structure and Connections

The network structure is characterized by a central node and multiple peripheral nodes, indicating a hub-and-spoke configuration.

The connections between the central node and the peripheral nodes are represented by lines, suggesting a direct relationship or flow of information between the central and peripheral elements.

Central Node and Peripheral Nodes

The central node is the primary point of connection, while the peripheral nodes are secondary points of connection.

The lines connecting the central node to the peripheral nodes represent the network structure.

The peripheral nodes are connected to the central node, forming a network structure.

The network structure is characterized by a central node and multiple peripheral nodes, indicating a hub-and-spoke configuration.

The connections between the central node and the peripheral nodes are represented by lines, suggesting a direct relationship or flow of information between the central and peripheral elements.

The network structure is characterized by a central node and multiple peripheral nodes, indicating a hub-and-spoke configuration.

The peripheral nodes are connected to the central node, forming a network structure.
