BAY OF PLENTY ELECTRICITY LIMITED Financial Statements for the purposes of Electricity (Information Disclosure) Regulations 1994

Notes to the Financial Statements for the 12 months ended 31 March 1998

1 Statement of Accounting Policies

These financial statements have been prepared for the purpose of complying with the requirements of the Electricity (Information Disclosure) Regulations 1994 and are intended for no other purpose.

A General Accounting Policies

The general accounting policies recognised as appropriate for the measurement and reporting of financial performance and financial position have been followed in the preparation of these financial statements. The historical cost method, as modified by the revaluation of certain assets, has been followed. Reliance has been placed on the fact that the business and undertakings of Bay of Plenty Electricity Limited are a going concern.

B Particular Accounting Policies

The following particular accounting policies, which significantly affect the measurement of financial performance and/or financial position have been applied:

i) Revenue

Revenue shown in the statement of financial performance comprises amounts received and receivable for goods and services supplied to customers in the ordinary course of business. Electricity revenue is based on actual and assessed readings plus an allowance for unread meters at balance date. Revenue is stated exclusive of Goods and Services Tax collected from customers.

ii) Principles of Consolidation

The consolidated financial statements are prepared from the financial statements of the Parent Company and its subsidiaries as at 31 March 1998 using the purchase method. The consolidated statement of financial performance includes the Group's share of the tax-paid surpluses of associate entities.

The equity method has been used for those associate entities in which the Group has a significant, but not a controlling interest.

All significant transactions between Group companies are eliminated on consolidation.

iii) Depreciation

Depreciation is charged to write off the cost of fixed assets to their estimated residual value over their expected useful lives. iv) Investments

Investments in associate entities are stated at the fair value of the net tangible assets at acquisition plus the share of post-acquisition increases in reserves.

Investments in subsidiaries are stated at cost.

Dividend income is accounted for on a cash basis.

Other investments are stated at the lower of cost or net realisable value.

v) Joint Venture

The Group's method of accounting for an interest in a joint venture is to recognise in the respective classification categories the amount of:

- (a) the Group's share in each of the assets employed in the joint venture; and
- (b) liabilities incurred in relation to the joint venture including the Group's share of liabilities for which it is severally liable; and
- (c) the Group's share of net expenses incurred and revenues earned in relation to the joint venture.

vi) Fixed Assets

The cost of purchased fixed assets is the value of the consideration given to acquire the assets and the value of other directly attributable costs which have been incurred in bringing the assets to the location and condition necessary for their intended service.

The cost of assets constructed by the Company includes the cost of all materials used in construction, direct labour on the project, and financing costs that are directly attributable to the project. Costs cease to be capitalised as soon as the asset is ready for productive use and do not include any inefficiency costs.

Generation and Distribution Assets are valued using modified historical cost. These assets are revalued on a cyclical basis at least every three years, by independent valuers.

vii) Inventories

Inventories are stated at the lower of average cost and net realisable value, with obsolete stock written off.

viii) Accounts Receivable

Accounts receivable are stated at estimated realisable value after providing for debts where collection is considered doubtful.

ix) Taxation

The liability method of accounting for deferred taxation has been applied.

BAY OF PLENTY ELECTRICITY LIMITED Financial Statements for the purposes of Electricity (Information Disclosure) Regulations 1994

Notes to the Financial Statements for the 12 months ended 31 March 1998

The taxation charge against the surplus for the year is the estimated liability in respect of that surplus after allowance for all permanent differences and timing differences not expected to reverse in the foreseeable future. This is the partial basis for the calculation of deferred taxation.

Future taxation benefits attributable to timing differences or losses carried forward are recognised in the financial statements only where there is virtual certainty that the benefit of the timing differences will be realised or any losses utilised.

x) Financial Instruments

Financial instruments with off-balance sheet risk, have been entered into for the primary purpose of reducing exposure to fluctuations in foreign exchange rates and interest rates. While financial instruments are subject to risk that market rates may change subsequent to acquisition, such changes would generally be offset by opposite effects on the items hedged.

Financial instruments entered into with no underlying exposure are accounted for on a mark to market basis.

xi) Research and Development

Costs incurred on all research and development projects are written off as incurred, except that development costs are capitalised to the extent that such costs are expected, beyond any reasonable doubt, to be recovered.

xii) Foreign Currency

Foreign currency transactions are recorded at exchange rates in effect at the date of settlement, except where forward contracts have been taken out to cover future commitments. Where forward contracts have been taken out, the transaction is translated at the rate contained in the contract.

C. Changes in Accounting Policies

The Bay of Plenty Trustee Limited was consolidated into the financial statements of the Group for the first time this year. In previous years the results of Bay of Plenty Trustee Limited were excluded from the Group financial statements. This change in accounting policy was adopted as it is considered to more fairly reflect that the parent company receives substantially all of the benefits of Bay of Plenty Trustee Limited's operations. The change in accounting policy does not have a material effect in the current year.

There have been no other material changes in accounting policies.

BAY OF PLENTY ELECTRICITY LIMITED Financial Statements for the purposes of Electricity (Information Disclosure) Regulations 1994

Notes to the Financial Statements for the 12 months ended 31 March 1998

2 Compliance with Electricity Disclosure Guidelines

The Ministry of Commerce (the Ministry) has produced guidelines to assist electricity distributors in complying with the various requirements of the Regulations. In particular, the Ministry provided guidelines for the methodologies to be used to separate and allocate revenues, costs, assets and liabilities of the Company into separate business units and resulting financial statements required by Regulation 6 of the Regulations.

The Company has followed the guidelines in all instances except as follows.

Assumptions for Direct Allocations:

Transmission Charges

Transmission charges, although completely absorbed by the Network business, as the guidelines recommend, have not been passed on to the Energy business.

Line Losses

Lines Losses are not settled between the energy business and the generators, as the guidelines recommend. The cost of line losses have instead been charged to the Network business by the Energy business.

Transmission Assets

Generation does not own transmission assets. The Company defines the point of injection as the point of exit from the Generation facilities.

All transmission assets are owned by the Network business.

Interface with Electricity Customers

The guidelines assume that the Energy business is the only interface with electricity consumers. The Company assumes that both the Network and Energy businesses interface directly with all consumers. Accordingly, line fees and energy sales are charged to customers as separate components and have been allocated directly to the respective business units.

The above assumptions have affected the following allocations.

Revenue

Connection fees for new customers have been allocated directly to the Network business.

Line fees charged to customers have been allocated directly to the Network business rather than the Energy business. The Network business has not charged the Energy business for services provided to it in respect of transmission charges incurred or the maintenance of the transmission facilities.

Line losses have been charged to the Network business by the Energy business.

Expenses

The costs of meter reading have been charged directly to the Network business as a cost necessarily related to the ownership of the meters. As line fees are allocated directly to the Network business, no charge for meter reading is made by it to the Energy business.

All marketing costs have been allocated in the same manner as other indirect costs and not to Energy business as recommended in the guidelines.

Bad and doubtful debt expenses have been allocated to the Network and Energy businesses in the proportion that line fees and energy sales represent the sum of those two items.

Assumptions for Indirect Allocations:

Where direct allocation of revenues, costs, assets and liabilities is not possible the Company has used as its basis of allocation the relative effort required to maintain the service each business unit provides to the consumer. The relative effort has been calculated on the basis of the number of staff directly employed by each business unit. The methodology is not considered a divergence from the guidelines.

Notes to the Financial Statements for the 12 Months ended 31 March 1998

16 Fixed Assets (Continued)

Current government valuations for non-generation land and buildings are \$3.9 million (1997 \$4.2 million). The valuations are dated October 1995 and September 1997.

The Optimised Deprival Value of the Distribution System (established 31 March 1997) is \$67,905,400.

Valuation of Generation and Distribution Assets

Generation and distribution assets are revalued on a cyclical basis with each class being revalued at least every three years.

Distribution assets were revalued at 31 March 1997. The value adopted is the Optimised Deprival Value of the distribution system as at 31 March 1997. The valuation report was prepared by Worley Consultants Limited (Registered Engineers) in conjunction with Coopers & Lybrand (Chartered Accountants). The valuation was performed in accordance with generally accepted valuation techniques. The Optimised Deprival Value is considered to be equivalent to net current value.

Generation assets were revalued at 31 March 1996 based on a valuation report prepared by Coopers and Lybrand (Chartered Accountants) and independently verified by Leyland Consultants Limited (Registered Engineers). The valuation established reflects the lower of net realisable value or net current value. The valuation has been calculated using net present values of predicted future cash flows, allowing for the benefit of avoided Trans Power New Zealand Limited transmission charges.

Notes to the Financial Statements for the 12 Months ended 31 March 1998

22 Capital Contributions

The Company has commitments for future capital expenditure amounting to \$372,196 (\$12,579,147 in 1997).

23 Financial Instruments

(a) The nature of activities and management policies with respect to financial instruments is described as follows:

Interest Rates

(i) The Company generally uses fixed rate loans to manage interest rate risk. The total level of fixed rate funding at 31 March was \$20,000,000 (1997 \$14,500,000), having a fair value of \$19,695,145 (1997 \$14,303,326). In addition, as at 31March 1998, the face value of the instruments the Group held were as follows:

Interest Rate Options:	Rate	Term	Commencement Date	Group 1998 \$000	Group 1997 \$000
Swap	7.6%	3 Years	7 November 1997	3,500	-
Swap	8.3%	2 Years	24 March 1998	1,000	-
Swap	7.1%	5 Years	3 April 1998	13,000	-
Swap	7.9%	16 Months	24 November 1997	2,500	-
Swap	7.7%	One Year	24 November 1997	4,000	-
Cap	8.7%	One Year	3 March 1997	-	13,000
Floor	8.0%	One Year	3 March 1997	-	13,000

(ii) Credit

In the normal course of its business the Company incurs credit risk from trade debtors and financial institutions. There are no significant concentrations of credit risk. The Company has a credit policy which is used to manage this exposure to credit risk. As part of this policy, limits on exposures have been set and are monitored on a regular basis. The bank risk is reduced by spreading short term investments over high credit quality financial institutions.

(iii) Foreign Exchange

The Company has, in this reporting period, conducted transactions in Foreign currencies for the purpose of capital expenditure. The Company policy is to fully hedge out foreign currency exposure by using Forward Rate Agreements (FRA) and currency options during this period.

Any gains or losses associated with hedging instruments are offset by the underlying exposure.

The contract amounts of foreign instruments outstanding at balance date are as follows:	• Group 1998 \$000	Group 1997 \$000	
Forward Rate Agreements	299	-	

Notes to the Financial Statements for the 12 Months ended 31 March 1998

(iv) Electricity Hedge Contracts

In common with other electricity companies the group seeks to limit its exposure to spot price movements by purchasing hedge instruments against future spot price. On maturity of these agreements there is potentially an asset or liability in relation to the electricity price hedges which has not been recognised in the financial statements. The face value of electricity hedge contracts entered into at balance date, with a view to protecting future profits, amounted to \$7,070,030 covering exposures from balance date forward three years (1997 - nil).

(b) Fair Values

Financial instruments in the current section of the balance sheet, with the exception of the current portion of term loans, are shown at values equivalent to their fair values. The fair value of term loans is disclosed in section (a) (i) above. Investments are shown at cost which is not significantly different from their fair values. The fair value of electricity hedge contracts at balance date has not been reported as it is not practicable to estimate that value with an acceptable level of reliability, due to the lack of depth of the forward market. On maturity of these instruments there is potentially an asset or liability in relation to the electricity price hedges which has not been recognised in the financial statements as it would be offset by opposite cost impacts on the items hedged.

Performance Measures for the 12 Months ended 31 March 1998

Disclosure of Financial Performance Measures and Efficiency Performance Measures pursuant to Regulations 13, 15 and 16 of the Electricity (Information Disclosure) Regulations 1994.

			1998	1997	1996	1995
Regu	latio	n 13:				
1)	Fin	ancial Performance Measures				
	(a)	Accounting Return on Total Assets	7.51%	6.50% *	5.43%	5.60%
	(b)	Accounting Return on Equity	5.21%	3.72%	3.63%	3.75%
	(c)	Accounting Rate of Profit	5.39% ¹	4.40% ¹	4.02%	4.25%

The objective of the measure "Accounting Rate of Profit" is to calculate the increase in the shareholder equity generated by the line business. The formula detailed in the first schedule of the Electricity (Information Disclosure) Regulations 1994 includes any revaluation as "profit". The increase in the reported ODV has been excluded from the calculation of the measure as there has been no increase in shareholder equity from the movement in the reported ODV. Any changes to the asset lives assumption in the ODV represent a change in the basis of the calculation rather than a change in valuation.

2) Efficiency	Performance N	leasures
_	/	T CLICITUMETCO I	10494169

(a)	Direct line costs per kilometre	\$ 2,180	\$ 1,550	\$ 1,837 *	\$ 3,204
(b)	Indirect Line costs per Customer				
	as prescribed	\$ 256	\$ 267	\$ 288 *	\$ 199 *
	as modified ²	\$ 121	\$ 136	\$ 159 *	\$ 97 *

² Indirect Line costs - modified

Total Indirect costs as prescribed in the Regulations include all costs that are not direct costs, after removing TransPower charges. Bay of Plenty Electricity, unlike most distribution companies, maintains its own generation division and has significant avoided charges which are charged to the Network division, and paid to the Generation division. The treatment of the avoided charges for the purposes of the efficiency measures, is to include these costs as indirect costs. The Company has provided additional disclosures to allow comparison with companies that do not have generation divisions.

BAY OF PLENTY

ELECTRICI

CERTIFICATION OF FINANCIAL STATEMENTS, PERFORMANCE MEASURES, AND STATISTICS DISCLOSED BY LINE OWNERS OTHER THAN TRANS POWER

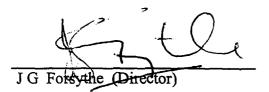

We, Colin George Houston Holmes, and John Gordon Forsythe, Directors of Bay of Plenty Electricity Limited certify that, having made all reasonable inquiry, to the best of our knowledge,-

(a) The attached audited financial statements of Bay of Plenty Electricity Limited prepared for the purposes of Regulation 6 of the Electricity (Information Disclosure) Regulations 1994, give a true and fair view of the matters to which they relate and comply with the requirements of those regulations; and

(b) The attached information, being financial performance measures, efficiency performance measures, energy delivery efficiency performance measures, statistics, and reliability performance measures in relation to Bay of Plenty Electricity Limited, and having been prepared for the purposes of Regulations 13, 14, 15, and 16 of the Electricity (Information Disclosure) Regulations 1994, comply with the requirements of the Electricity (Information Disclosure) Regulations 1994.

The valuations on which those financial performance measures are based are as at 31 March 1998.
